Paper 1

3 hours

INSTRUCTIONS TO CANDIDATES:

- *This examination paper consists of two sections; **A** and **B**. it has four items.*
- *Section A has **two** compulsory items.*
- *Section **B** has two optional items parts. Respond to **one** item.*
- *Attempt **three** items in all.*
- *You may use diagrams where applicable to illustrate your answers.*
- *Any additional item **(s)** attempted will not be scored.*
- *Responses to each item must begin on a new page*

SECTION A

Item.1 Map Skills

For this item use the East Africa (Uganda) map extract of Moroto, Series 1732, about 27/3 Edition 5-D.O.S.

Moroto is one of the districts of Karamoja in North Eastern Uganda located between Latitude 2º 30' and 2° 40' North of the Equator and Longitude 34° 35' and 34° 45' East of the Greenwich meridian.
The region has for many years been regarded as one of the least developed in the country despite having a variety of valuable resources such as minerals vegetation types, drainage and vast land.
The local Council Administration in Moroto has organized a consultative meeting at Moroto Town with various stakeholders in the region and you are to represent the youth. A meeting has been to find out the influence of relief on land uses in the area, how relief influence the vegetation of the area and recommend suitable commercial activities that can be carried out in the area without affecting the natural resources.

Task
Prepare a write-up to guide your discussions. The write-up should include a suitable illustration of the landscape of the area and address the concerns of the meeting while giving specific examples from the map extract.

Item 2

You are part of a school team conducting a field study along a river in Western Uganda. You observed that river has magnificent features which provide many opportunities to the communities around for improved livelihood. As you move from the source toward the mouth; you observe changes in the river's shape and flow. At one point, the river is fast flowing, while at another point the river flows slowly. This has resulted into formation of erosional and depositional features. During your study, local residents tell you about tourism at the water falls, fishing activities in the lower areas, irrigation and soil erosion problems in the steeper areas

The meeting has been organized to launch a program aimed at promoting the use river resources at the community level. One of the strategies is, to sensitize the community on the use of the resources. You have been selected to prepare a written document for community education

@ 2026 BUGTAAB Examination Board

Support material

Task

Make a write-up that will be used to sensitize the communities along river on how best to use those features of the river. The report should contain suitable sketch of the area showing the features, formation of any three features shown in the photograph above and strategies to reduce problems along rivers.

SECTION B

*Respond to only **one** item from this section*

Item 3

The government of Uganda is planning to establish agro-processing industries and improve agriculture in different parts of the country. However, planners have observed marked differences in the atmospheric conditions related with the amount of moisture between Southern Uganda and North Eastern Uganda as shown in the table below.

In South Western Uganda, residents often experience hot, sticky conditions, clothes take longer to dry after washing, mold frequently grows on walls and stored materials, and fungal diseases affecting crops are common. Morning mist is also a frequent occurrence.

In contrast, North Eastern Uganda experiences a much drier atmosphere. Washed clothes dry quickly; grains can be stored for longer periods with less spoilage and clear skies are common during the dry season. However, crops and livestock often suffer from moisture stress and dust is common during prolonged dry periods.

As a geographer, you have been appointed to advise the government on how these atmospheric differences influence development and how planned investment can be adapted to suit each region.

Daily average readings of weather:

Region	**Time**	**Air Temperature (°C)**	**Moisture content of the air (%)**
Southern Uganda	6:00 am	20	95
	12:00 noon	27	72
	3:00 pm	29	68
	6:00 pm	24	88
North Eastern Uganda			
	6:00 am	22	58
	12:00 noon	34	28
	3:00 pm	36	22
	6:00 pm	30	40

Source; International Meteorological Organization (WMO)

Task:

Prepare an advisory report to the government of Uganda. Your report should include: factors responsible for the differences in the atmospheric conditions observed in the two regions and strategies for managing the challenges associated with the atmospheric condition in each region.

Item 4

Climate change is one of the greatest environmental challenges of our time. It is largely driven by both natural processes and human activities. Its impacts are global, but they manifest differently across regions, influencing ecosystems, economics, and human livelihoods.

In East Africa, rainfall and sunshine once followed predictable seasonal cycles. Farmers relied on distinct wet and dry seasons to plan agricultural activities. However, in recent years, these patterns have drastically changed. Rainy seasons have turned into prolonged dry spells, creating little distinction between wet and dry periods. This has severely affected farming communities, leading to crop failures, food shortages, and increased vulnerability. Beyond Africa, the effects of climate change are evident worldwide. Ice sheets in the Arctic and Polar Regions are melting, contributing to rising sea levels. In pastoral communities, competition for pasture has intensified, sparking conflicts and instability. In some areas, seas and lakes have started retreating, altering ecosystems and threatening water security. These changes have created fear, uncertainty, and instability in different parts of the world due to competition for scarce resources.

Recognizing the urgency of the situation, the Uganda Meteorological Association has approached you to carry out a feasibility study on climate change, focusing on its causes, challenges, and developmental implications.

Task

Make a write-up that you will present to the association members. In your write-up include the causes of the phenomena in question, its negative effects and how it can be mitigated**.**
