SECTION A

This section is compulsory

Item 1

Kasese Community Secondary School has in recent years experienced a number of administrative and academic challenges that are affecting effective service delivery. Examination papers are often poorly typed and contain several errors, learners' records kept in paper files are frequently misplaced, and communication between the school administration and parents is slow and unreliable. In addition, cases of theft involving computers, printers, and other equipment from the computer laboratory have increased, disrupting teaching and learning. The school management committee has agreed that ICT should be introduced to improve document preparation, records management, communication, and the security of school property.

However, the head teacher lacks knowledge about the appropriate ICT tools required and the measures necessary to keep them in good working condition for continued service. He has therefore approached you for professional guidance.

Task:
Prepare a document to guide the head teacher on the appropriate ICT tools to use and advise on the measures for maintaining them for continued serve.

SECTION B

Part I

(Respond to one item from this part)

Item 2

Mariam operates a small secretarial and printing business in Fort Portal City where she offers typing, photocopying, scanning, printing, and internet browsing services. Over the past few months, the computers in the office have become increasingly slow, some applications fail to open, and several clients have complained that their documents sometimes disappear from the systems. As a result, the business has started losing customers and income. At the same time, the office has accumulated a large number of non-functional keyboards, damaged printers, old computer monitors, broken mice, and unused cables which now occupy much of the workspace and pose risks to both workers and customers.

Mariam suspects that poor system handling and failure to properly manage the faulty devices may be contributing to the challenges. She needs your guidance to prevent further losses and improve operations.

Task:
Advise Mariam on how best she can;

(a) handle the computer system challenges affecting service delivery in her business.
(b) manage the faulty and old electronic equipment occupying the office.

Item 3

Mr. Tumusiime works as a records officer at a busy health centre in Mbarara City. The health centre receives many patients every day, which forces him to spend long hours on a desktop computer entering patient details, typing reports, and updating digital records. As a result, he has recently started experiencing eye strain, neck pain, backache, and wrist discomfort. In addition, some important patient files have occasionally been lost or become inaccessible, causing delays in service delivery and raising concerns about privacy of patient information.

Due to limited office space, the records room is overcrowded with old non-functional computers, damaged monitors, faulty printers, and other electronic devices piled in one corner. Mr. Tumusiime is worried that the situation may continue affecting both his health and the safety of the office environment.

Task:
(a) *Make a write-up explaining how Mr. Tumusiime can handle the health and data safety challenges without leaving his job.*

(b) Advise him on the best methods of managing the old non-functional computers and electronic equipment in the office.

Part II

Respond to one item from this part

Item 4

The Ministry of Public Service recently advertised internship opportunities for Senior Four leavers through its online recruitment portal. Applicants are required to create an email address, type an application letter, scan and attach copies of their academic documents and National Identity Card, save the files in an appropriate format, and submit the application through the ministry website before the deadline. A student named Amina was interested in applying for the opportunity but failed because she lacked the ICT knowledge and skills required to access the internet, prepare the required documents, save them correctly, and upload them online.

She is worried that she may continue missing such opportunities in future if she does not improve her ICT skills. She has therefore approached you for guidance.

Task:
Guide Amina on the procedure and the necessary ICT tools to use in order to apply for similar opportunities in future.

Item 5

A farmers' cooperative society in Kabale District has recently received information about an online agricultural support platform that provides updates on weather forecasts, improved seed varieties, pest control methods, and market prices for farm produce. To access the platform, members are required to register online by downloading an application form from a website, filling it, saving the completed document, attaching the group's details, and submitting it through email. However, many members of the cooperative have limited knowledge of ICT and are unable to use computers, smartphones, email, and internet services effectively.

As a result, they have continued missing important information that would improve their farming methods and increase production. The chairperson has now approached you for assistance.

Task:
Prepare a document indicating the appropriate ICT tools and the steps to be followed to help the farmers access, store, and share information using the online platform.
