PROGRAMME FOR THE ANNUAL STUDENTS' SEMINAR 2026

Date: Sunday 5th July, 2026 Time: 8:30am – 5:15pm Venue: Complex Hall

SN	TIME	ACTIVITY	INCHARGE	REMARKS
TIME MANAGER: MR. KAWEESA EDWARD				
1.	7:30am – 8:30am	Arrival of students and clearance.	-Ms. Ngire Judith -Mr. Tumwine Barnabas -Ms. Batenga Shamirah -Mr. Ssenoga Chales John	
2.	8:30am – 8:45am	- Anthems - Opening prayer	-Buddo S.S students	
3.	8:45am – 9:00am	Opening remarks	-Mr. Kalungi Edward.	
4.	9:00am – 10:30am	Understanding the demands of History at Advanced level under the C.B.C.	FACILITATOR, **X.X.X**	
5.	10:30am–12:30pm	A comprehensive study of History P210/1 **(World Socio-Economic and Political History since 1800)**	FACILITATOR, **Y.Y.Y** and FALITATOR, **Z.Z. Z**	
6.	12:35pm – 1:00pm	Self-discovery. Learners interact with facilitators on an individual basis.	**ALL** FALITATORS	
7.	1:00pm – 1:40pm	Sensitizing **teachers** about the teaching, learning and assessment of History at 'A' level under CBC.	Subject **Specialist**.	
8.	1:40pm – 2:20pm	**LUNCH**	- Prof. Kato .S**.(Head Welfare)** - Ms. Batenga .S. - Mr. Kalungi .E. - Mr. Ssenoga .C. - Ms. katusiime D.	
9.	2:30pm – 4:30pm	A comprehensive study of History P210/1 **(History of World Affairs since 1789)**	FALITATOR, **R.R.R** and FACILITATOR **S.S.S**	
10.	4:30pm - 5:00pm	Self-discovery: Learners interact with facilitators on an individual basis.	**ALL** FACILITATORS	
11.	5:00pm – 5:15pm	Closing remarks	Mr. Gombya Solomon (School counsellor – B.S.S)	
PROGRAMME COORDINATOR : MR. KIRIGWAJJO ABEL				

TOPICS UNDER EACH ELEMENT OF CONSTRUCT.

P210/1: WORLD SOCIO-ECONOMIC AND POLITICAL HISTORY SINCE 1800.

CONSTRUCT 1: SOCIO-ECONOMIC SYSTEMS IN AFRICA

1. The social and economic systems in the pre-colonial institutions in Africa
2. The pre-colonial trade systems in Africa
3. Islamic Revolutions in Africa
4. Post-Colonial Socio-Economic Developments in E. Africa
5. Regional economic groupings and international relations
6. World War II 1939 – 1945 and its aftermath
7. Nationalization of education in Uganda
8. Challenges of African growth and development

CONSTRUCT 2: COLONIALISM, NATIONAL AGITATIONS, AND THE RISE OF NEW STATES

1. The Scramble for and Partition of Africa 1888 – 1914
2. Establishment of colonial rule in Africa
3. Colonial administration in Africa
4. Lessons from the rise of the United States of America and Canada
5. Foreign struggles for economic resources and unification in southern Africa
6. Regional economic groupings and international relations
7. The growth of Pan-Africanism
8. The rise of African nationalism
9. Separatism and ethnic nationalism in Africa
10. The unification struggles in Europe up to 1871
11. Sierra Leone and Liberia in the World Context
12. Nationalism and challenges of integration in the Middle East
13. Sovereignty and constitutionalism in East Africa

P210/2: HISTORY OF WORLD AFFAIRS SINCE 1789.

ELEMENT OF CONSTRUCT 3: REVOLUTIONS AND THEIR IMPACT ON THE WORLD

1. The French Revolution of 1789
2. The era of Napoleon Bonaparte
3. Restoration of order and stability in Europe (1814-1830)
4. The Revolutions of 1848 in Europe
5. The Eastern Question 1815-1913
6. Post-World War I Ideologies in Europe

ELEMENT OF CONSTRUCT 4: GLOBAL POLITICS AND IDEOLOGIES

1. Post-Independence ideologies in E. Africa
2. World War I and its aftermath
3. Post-World War I Ideologies in Europe
4. World War II 1939-1945 and its aftermath
5. Nationalism and challenges of integration in the Middle East
6. Development of Southern Asia and the far East since 1939

TIPS OF WRITING AN EXCELLENT ESSAY

Learners make their own notes after interacting with facilitators during the seminar.

P210/1: WORLD SOCIO-ECONOMIC AND POLITICAL HISTORY SINCE 1800.

CONSTRUCT 1: SOCIO-ECONOMIC SYSTEMS IN AFRICA

Item .1

Pre-colonial African societies-maintained peace, stability and economic interaction through a variety of social, political and economic arrangements that differed across communities. These arrangements shaped relationships within and between communities and influenced patterns of cooperation, conflict management and resource sharing. Over time, they contributed to the organization of community life and interactions among neighboring societies.

For several years, Doko community has experienced rising youth involvement in drug abuse, theft and the destruction of communal water sources. At the same time, a land boundary dispute between two neighboring families has created divisions that are affecting cooperation within the community and discouraging traders from neighboring areas from participating in the weekly market. Local leaders have also expressed concern over the declining trust in precolonial African practices. They feel something should be done to restore peace, rebuild trust and revive economic activities.

Task:

(a) Examine the contribution of pre-colonial African social, political and trade systems to peace, stability and economic development in African societies.

Problem Statement

Doko community faces rising youth crime, drug abuse, and vandalized infrastructure, alongside a divisive family land dispute that disrupts local trade.

Introduction

Before colonial rule, African societies built well-organized social, political, and economic institutions that sustained peace, stability, and mutual development. Social structures instilled moral discipline, while political leaders-maintained order and resolved internal disputes fairly. Economically, local and long-distance trade networks fostered cooperation and deep community interdependence. These foundational principles remain highly relevant today in addressing modern social friction, political governance issues, and economic instability within local communities.

Body

- Pre-colonial African societies were organized around strong kinship systems such as clans, lineages and extended families which created a sense of identity and belonging among members. These structures ensured that individuals were socially accountable since elders exercised authority over behavior, guided moral conduct and resolved minor disputes within families. This reduced crime and internal conflict because wrongdoers were corrected early through counselling and social pressure. For example, among the Baganda, clan heads played a key role in maintaining discipline and settling family misunderstandings. Such systems contributed to stability by preventing disputes from escalating into wider community conflicts and they promoted unity which supported peaceful coexistence.
- Age-set and initiation systems played a major role in shaping disciplined and responsible citizens who contributed to social order. Young people were trained in values such as respect, courage, hard work and loyalty to the community during initiation ceremonies. These teachings discouraged deviant behaviour and encouraged youth to contribute positively to society. For example, among the Maasai and Karimojong, age sets were responsible for community protection and livestock security, which strengthened order and cooperation. This helped societies maintain stability by reducing youth misconduct and ensuring that young people were integrated into productive social roles.

- Traditional political systems based on kings, chiefs and councils of elders provided effective governance and conflict resolution mechanisms. Leaders were respected because their authority was rooted in custom and tradition, and they were responsible for maintaining law and order. Disputes were settled through dialogue and consensus, which reduced hostility and promoted reconciliation. For example, among the Acholi, elders used customary courts (mato oput system) to resolve serious conflicts through compensation and forgiveness. This ensured that conflicts did not lead to long-term violence, thereby maintaining peace and political stability.
- Customary laws regulated social behaviour and ensured justice was restorative rather than punitive, focusing on reconciliation between conflicting parties. Offenders were often required to compensate victims through livestock or goods, which restored relationships and prevented cycles of revenge. This helped maintain harmony within communities because justice was seen as fair and acceptable to all parties. For example, many East African societies used compensation systems in cases of theft or injury to restore balance. Such practices reduced resentment and promoted long-term stability in society.
- Local trade systems encouraged economic specialisation and interdependence among different communities, which strengthened production and wealth creation. People exchanged goods such as food crops, iron tools, pottery and livestock, ensuring that communities accessed what they could not produce themselves. This increased efficiency and encouraged surplus production for exchange. For example, agricultural communities traded food with iron smelters who produced tools used for farming. This stimulated economic development by increasing productivity and improving living standards within societies.
- Long-distance trade networks connected different African regions and promoted peaceful interaction between societies through mutual economic dependence. Trade routes required security and cooperation, which reduced hostility between communities. Goods such as salt, gold, ivory and cloth were exchanged across vast distances, linking West, East and North Africa. For example, the trans-Saharan trade connected the Mali Empire with North African traders, while East African coastal trade linked inland communities with Swahili city-states. These networks promoted economic integration and diplomatic relations, contributing to both prosperity and peace.
- Strong political organisation ensured security along trade routes and within markets, which encouraged economic growth and stability. Rulers provided protection for traders and regulated market activities to ensure fairness and order. This made trade safer and more reliable, attracting more participants. For example, the Mali Empire under Mansa Musa secured trade routes and encouraged commercial expansion across West Africa. Such political stability created an environment where economic activities could thrive without fear of insecurity or disruption.
- Communal ownership and cooperative labour systems strengthened social bonds and increased productivity in agriculture and other economic activities. Communities worked together during farming, harvesting and construction, ensuring that even vulnerable members were supported. Shared responsibility over resources such as land and water prevented exploitation and ensured equitable access. For example, many Bantu-speaking societies practised communal farming where neighbors assisted each other during peak agricultural seasons. This strengthened unity, reduced inequality and improved overall economic development.

(b) Explain how lessons from these systems can be applied to address the challenges facing Doko community.

- Strengthening kinship and family structures can help address youth involvement in drug abuse, theft and destruction of communal resources in Doko community. Families and clan elders can take an active role in guiding young people, monitoring their behaviour and providing moral education. Regular family meetings and counselling can help correct deviant behaviour early

before it escalates. In pre-colonial societies, elders ensured discipline through close supervision, which reduced crime. Applying this would restore moral responsibility among youth in Doko.

- Reviving councils of elders can help resolve the land boundary dispute between the two families through dialogue and customary mediation. Elders can act as neutral arbitrators who listen to both sides and guide them toward peaceful settlement. This avoids prolonged hostility and division within the community. In pre-colonial Africa, elders resolved disputes through consensus-based justice systems such as the Acholi mato oput. This approach would restore unity and cooperation in Doko.
- Reintroducing cultural values of respect, honesty and communal responsibility can rebuild trust in pre-colonial practices. Community sensitisation meetings can teach youths the importance of protecting shared resources like water sources. This would reduce vandalism and promote accountability. In pre-colonial societies, moral values were taught through initiation and storytelling, ensuring responsible behaviour. Applying this in Doko would strengthen social cohesion.
- Establishing community-based management of resources can protect communal water sources from destruction. Committees made up of respected community members can oversee usage and maintenance of these resources. Those who damage communal property can be required to repair or replace it. This reflects pre-colonial communal ownership systems where resources were collectively protected. It would ensure sustainability and reduce resource-related conflicts in Doko.
- Restoring peaceful relations between the two families can revive economic activity and encourage traders from neighboring areas to return to the weekly market. Once trust and security are restored, trade will increase, improving incomes and livelihoods. In pre-colonial times, markets flourished in peaceful environments where traders felt secure. This would directly address the decline in economic activity in Doko caused by the dispute.
- Introducing structured youth engagement programs such as sports, vocational training and community service can reduce drug abuse and theft. These activities provide alternatives that keep young people productively occupied. In pre-colonial societies, age-set systems assigned youths productive roles in society, reducing idle behavior. Applying this would help redirect energy into constructive development in Doko.
- Promoting reconciliation ceremonies between conflicting families can restore broken relationships and rebuild trust within the community. Such ceremonies encourage forgiveness and social healing, allowing people to move forward collectively. In many African societies, reconciliation rituals were used to end conflicts and restore harmony. This would reduce divisions currently affecting cooperation in Doko.
- Strengthening cooperation with neighboring communities through joint markets and dialogue forums can restore trade and economic stability. Regular interaction builds trust and encourages mutual support. In pre-colonial Africa, trade networks thrived because communities maintained peaceful relations. Applying this lesson would revive Doko's weekly market and improve economic activity.

Conclusion

Pre-colonial systems prove that sustainable peace relies on moral discipline, collective responsibility and restorative justice. Although modern governance operates differently, adapting these indigenous values offers Doko a powerful framework to complement current laws. By reviving consultative leadership and communal cooperation, the community can easily reverse youth crime, resolve disputes, and revive local commerce.

Item 2

The cooperative movement and trade unions became important economic institutions in post-colonial East Africa. Over time, these organizations developed within different economic sectors and became part of broader efforts to organize economic activity and worker relations. In their early years, many of them were associated with initiatives aimed at improving members' livelihoods and strengthening participation in economic life. However, as they expanded, many cooperatives and trade unions experienced challenges that reduced their effectiveness and weakened public confidence.

A cooperative union in Tunde is experiencing serious management and financial difficulties. Many farmers claim that they have not received payments for produce supplied to the cooperative while allegations of poor financial management have created mistrust between members and the leadership. As a result, several farmers have stopped delivering their produce to the cooperative and are considering selling independently to private buyers. Community leaders fear that if the situation continues, farmers' incomes, employment opportunities and the local economy will be greatly affected.

Task

(a) Analyse the development of cooperative movements in addressing post-colonial East Africa.

Problem Statement

Tunde Cooperative Union suffers from delayed payments and financial mismanagement, causing disillusioned farmers to sell independently to private middlemen.

Introduction

Post-colonial East African states promoted cooperative movements and trade unions as vital strategies for economic growth, labor protection, and rural poverty reduction. Cooperatives empowered smallholder farmers to pool resources, secure fair commodity pricing, access cheap production credit, and purchase subsidized inputs. While early initiatives transformed rural livelihoods, expanding unions eventually faced crippling leadership struggles, financial mismanagement, and state co-optation. These historical outcomes offer clear blueprints for modern institutional revival.

Body

- Cooperative movements in post-colonial East Africa developed as a response to the need for African farmers and workers to improve their economic bargaining power after independence. They were introduced and expanded to help small-scale producers pool resources, access markets and eliminate exploitation by middlemen. In countries such as Uganda, Kenya and Tanzania, cooperatives became important channels for cash crop marketing like coffee, cotton and tea. This development helped rural farmers increase income and participate more effectively in the national economy.
- Many cooperative societies were formed in the agricultural sector to assist farmers in collective marketing of produce, storage and distribution. By working together, farmers were able to achieve better prices and reduce transport costs, which improved household incomes. For example, coffee cooperatives in Bugisu and cotton cooperatives in northern Uganda enabled farmers to sell collectively to government marketing boards. This strengthened rural economies and improved standards of living in farming communities.
- Governments in post-colonial East Africa played a central role in establishing and regulating cooperative movements to promote economic development. State support included providing legal frameworks, training cooperative officers and offering financial assistance. In Tanzania, for example, the government under Ujamaa policies integrated cooperatives into its socialist development strategy. This involvement helped expand cooperative structures and increased rural participation in economic activities.

- Cooperatives were used as instruments for rural development and poverty reduction by mobilising farmers to participate in organised production and savings schemes. They provided access to credit facilities, agricultural inputs and extension services. This improved productivity and encouraged modern farming practices. In Kenya, coffee and dairy cooperatives supported farmers with loans and market access, which enhanced agricultural output and rural development.
- Trade unions developed alongside cooperatives to protect the rights of workers in urban and industrial sectors. They advocated for better wages, improved working conditions and job security. In East African cities such as Nairobi, Kampala and Dar es Salaam, trade unions became important voices for labour rights. This development strengthened industrial relations and contributed to improved welfare for workers.
- Cooperatives also expanded into non-agricultural sectors such as savings and credit societies (SACCOs), housing cooperatives and transport unions. These institutions enabled members to pool savings and access affordable loans, which promoted entrepreneurship and economic empowerment. For example, SACCOs in Uganda and Kenya provided financial services to low-income earners who were excluded from formal banking systems. This diversification made cooperatives more relevant to wider sections of society.
- Despite their growth, cooperative movements were affected by political interference and mismanagement in many East African countries. Governments sometimes used cooperatives for political mobilization rather than economic efficiency, which weakened their autonomy. This led to inefficiency and reduced trust among members. For example, excessive state control in some Ugandan cooperatives contributed to declining performance in the late 1970s and 1980s.
- Over time, cooperative movements became key contributors to national economies by promoting collective ownership, savings culture and rural-urban economic linkages. They helped integrate rural producers into national and international markets, increasing export earnings and employment opportunities. This development made cooperatives an important pillar of post-colonial economic transformation in East Africa.

b) Explain how lessons from the successes and challenges of cooperative movements can be applied to address the challenges in the scenario.

- Strengthening financial accountability systems can address the mistrust and claims of unpaid farmers in Tunde cooperative. Proper record keeping, transparent audits and regular financial reporting would ensure that members trust the leadership. In successful cooperatives, transparency has been key to sustaining member confidence and participation. Applying this would restore trust and encourage farmers to continue supplying produce.
- Introducing independent auditing mechanisms can help resolve allegations of poor financial management within the cooperative. External auditors can verify accounts and ensure that funds are properly managed. In many successful SACCOs in East Africa, external audits have improved efficiency and reduced corruption. This would restore credibility and prevent further withdrawal of members in Tunde.
- Strengthening democratic participation in cooperative leadership can reduce mismanagement and improve decision-making. Members should regularly elect leaders and participate in key decisions affecting pricing and payments. In well-functioning cooperatives, member participation ensures accountability and responsiveness. This would rebuild confidence among farmers who currently feel excluded.
- Providing capacity building and training for cooperative leaders can improve financial and managerial skills. Many cooperative failures have resulted from poor leadership rather than lack of resources. Training in accounting, management and governance would improve efficiency. This lesson from successful cooperatives would help stabilise operations in Tunde.

- Encouraging member education on cooperative principles can reduce misinformation and mistrust among farmers. Educated members are more likely to participate actively and hold leaders accountable. In strong cooperatives, member awareness has improved cohesion and reduced conflicts. Applying this would help restore unity in the Tunde cooperative.
- Introducing strict regulatory oversight from government or cooperative unions can help ensure compliance with cooperative rules. Oversight bodies can monitor financial activities and intervene in cases of mismanagement. In East Africa, regulatory frameworks have helped stabilise cooperative sectors where properly enforced. This would protect farmers' interests and restore order.
- Rebuilding trust through regular communication between leadership and members can reduce suspicion and prevent withdrawal of farmers. Regular meetings, feedback sessions and transparent updates can improve relationships. Successful cooperatives often maintain strong internal communication systems. This would encourage farmers in Tunde to continue delivering their produce instead of selling independently.
- Diversifying cooperative services such as storage, credit and marketing support can improve member benefits and increase loyalty. When members see clear advantages, they are more likely to remain committed. In successful East African cooperatives, diversified services have strengthened sustainability. This would improve economic stability and prevent collapse of the cooperative in Tunde.

Conclusion

East Africa's historical trajectory proves that cooperative success hinges on financial transparency, democratic autonomy, and professional competence. Conversely, corruption and political interference cause total institutional decay. By enforcing strict internal financial controls, electing trusted leaders, and professionalizing trade management, Tunde Cooperative can restore member loyalty, protect local livelihoods, and stabilize the regional economy.

Item 3

Regional economic cooperation has become an important strategy for promoting economic growth and strengthening relations among neighboring countries. After independence, African states established regional economic groupings such as COMESA and SADC as part of broader efforts to enhance cooperation among member states. Similar initiatives had earlier been undertaken in Europe through the formation of the European Economic Community (EEC), which sought to strengthen economic relations among participating countries. These regional organisations have played a role in shaping economic interactions and cooperation among states in different parts of the world.

A cross-border trade dispute has developed between two neighbouring states following disagreements over new trade regulations affecting the movement of manufactured goods. The delays have left hundreds of cargo trucks stranded, disrupted the transportation of agricultural produce and increased the cost of doing business for traders on both sides of the border. Business associations have raised concerns that prolonged disruptions could reduce trade, affect household incomes and strain relations between the two neighbouring countries.

To address the situation, representatives from government agencies, transport companies, business associations and regional trade bodies have convened a meeting to identify practical measures for restoring the smooth flow of trade and strengthening regional economic cooperation.

Task

a) Analyse the role of the regional economic organisations mentioned in the scenario in promoting trade and economic integration.

Problem Statement

A cross-border dispute over new trade regulations has stranded hundreds of cargo trucks, threatening household incomes and straining relations between neighboring states.

Introduction

Post-independence African states established regional economic organizations like COMESA and SADC to accelerate trade integration and regional growth. These frameworks aimed to eliminate trade barriers, streamline transport logistics, and resolve cross-border disputes. While regional integrations unlock immense macroeconomic benefits and foster international diplomacy, their effectiveness is frequently tested by regulatory protectionism and sudden geopolitical border closures. Historical lessons offer practical solutions for resolving contemporary trade deadlocks.

Body

- Regional economic organisations such as COMESA and SADC have played a key role in promoting free trade among member states by reducing tariffs and removing barriers to the movement of goods and services. This has enabled traders to access larger markets beyond national boundaries, increasing competition and efficiency. For example, COMESA has worked to create preferential trade arrangements that reduce the cost of exporting goods among member countries. This has strengthened economic integration by encouraging cross-border trade and expanding market opportunities for producers.
- These organisations have facilitated the creation of common trade policies that harmonise regulations among member states. By standardising customs procedures and trade documentation, they reduce delays and confusion at border points. This promotes smoother movement of goods and reduces transaction costs for traders. In SADC, efforts to harmonise customs regulations have improved regional trade efficiency. This contributes to integration by aligning national economic systems into a more coordinated regional framework.
- Regional organisations promote infrastructure development to support trade, including transport networks, railways, roads and border facilities. Improved infrastructure reduces transportation costs and increases the speed of movement of goods. For example, COMESA has supported transport corridor development linking inland countries to coastal ports. This strengthens economic integration by physically connecting member states and facilitating easier movement of goods and services.
- They enhance cooperation in resolving cross-border trade disputes through dialogue and mediation mechanisms. When disagreements arise between member states, regional bodies provide platforms for negotiation and peaceful settlement. This reduces the risk of prolonged conflicts that could disrupt trade. For example, SADC has often intervened in trade-related disputes to ensure continuity of economic activities. This strengthens regional stability and promotes confidence among traders.
- Regional economic organisations promote industrial and agricultural cooperation by encouraging member states to specialize in production based on comparative advantage. This increases efficiency and maximises regional output. For example, some countries focus on manufacturing while others concentrate on agriculture, allowing complementary trade. This enhances economic integration by linking production systems across borders.
- They encourage the free movement of people, labour and services across member states, which supports business expansion and employment opportunities. Traders, transporters and professionals can operate in multiple countries more easily. COMESA's protocols on movement of persons have supported regional labour mobility. This increases economic interaction and strengthens integration among member states.

- These organisations support the development of regional financial institutions and payment systems that facilitate cross-border transactions. This reduces reliance on foreign currencies and simplifies trade payments. For example, regional payment systems within COMESA have improved transaction efficiency. This strengthens economic integration by making trade financially easier and more reliable.
- Regional economic organisations promote peace and political cooperation among member states, which is essential for stable economic relations. Peaceful relations reduce trade disruptions and encourage investment. Through regular summits and diplomatic engagement, organisations like SADC help maintain stability in the region. This ensures that economic integration is sustained over time.

(b) Explain how lessons from these regional economic organisations can be applied to address the trade challenges facing the two states in the scenario.

- Reducing or harmonising trade regulations between the two states can help remove delays at border points and restore the smooth flow of goods. Simplified customs procedures would ensure faster clearance of cargo trucks currently stranded at the border. In regional organisations like COMESA, harmonised trade rules have reduced bottlenecks. Applying this would directly address the disruptions affecting traders in the scenario.
- Establishing a bilateral dispute resolution mechanism can help the two states resolve disagreements over trade regulations quickly and peacefully. A joint committee could negotiate solutions without escalating tensions. In SADC, mediation structures have successfully resolved similar disputes. This would restore trust and prevent prolonged disruption of trade between the two countries.
- Improving border infrastructure and staffing can reduce congestion and speed up clearance of goods. Expanding customs facilities and increasing trained personnel would help handle high volumes of trade efficiently. In COMESA-supported transport corridors, improved border posts have reduced delays. This would address the stranded trucks and restore normal trade flow in the scenario.
- Introducing one-stop border posts can streamline procedures by allowing traders to complete clearance in one location instead of multiple checks. This reduces duplication and saves time and costs. Many East African trade corridors have successfully used this system to improve efficiency. Applying it would ease congestion and improve movement of goods between the two states.
- Strengthening communication between government agencies, transport companies and business associations can help identify problems early and coordinate solutions. Regular consultations ensure that policies do not negatively affect traders unexpectedly. In successful regional blocs, stakeholder engagement has improved policy effectiveness. This would reduce frustration among traders affected in the scenario.
- Promoting trust-building measures between the two governments can reduce suspicion and improve cooperation. Diplomatic dialogue and joint trade reviews can help align policies. In regional organisations, regular summits strengthen relationships among member states. This would help restore positive relations and prevent future trade disruptions.
- Introducing temporary trade facilitation measures can help restore economic activity while long-term solutions are being developed. For example, allowing provisional clearance of goods can reduce backlog at the border. Regional bodies often implement such emergency measures during disputes. This would reduce economic losses affecting traders and households in the scenario.
- Encouraging regional economic integration frameworks between the two states can help align long-term trade policies and prevent future conflicts. This includes adopting shared standards and coordinated trade strategies. In organisations like SADC, long-term integration policies have reduced disputes. This would strengthen stability and ensure sustained economic cooperation between the two countries.
- Learners give a valid conclusion.

TRIAL ITEM.

Education systems in Uganda have evolved over time, influenced by both indigenous practices and later external systems introduced during different historical periods. At independence, Uganda inherited an education structure that had developed during the colonial period. Over time, questions emerged regarding how well the system aligned with national development priorities. As a result, successive governments introduced various reforms intended to respond to changing social and economic conditions and to improve the relevance of education.

Tata community is facing a growing number of unemployed school leavers and graduates despite increasing investment in education. Local industries report difficulties in recruiting technicians, electricians, mechanics and other skilled workers, forcing some employers to hire labour from neighboring countries. At the same time, many young people argue that the education they received did not adequately prepare them for available employment opportunities or self-employment. The situation has affected household incomes, slowed local industrial growth and increased public concern about the relevance of the education system. Education stakeholders within the community want to devise strategies to address the issues.

Task

a) Examine the colonial education system and its limitations in meeting Uganda's socio-economic needs.
(b) Suggest strategies that the stakeholders of Tata community can use to address the challenges in the scenario.

CONSTRUCT 2: COLONIALISM, NATIONAL AGITATIONS, AND THE RISE OF NEW STATES

Item 5

The nineteenth century witnessed increased European interest in Africa as industrialisation expanded and European states intensified their global engagements. During this period, African societies also developed intellectual and political responses influenced by emerging Pan-African ideas, which encouraged discussions on unity, dignity and self-determination. These developments contributed to growing interactions between Africa and external powers in the late nineteenth century.Although many African countries attained political independence during the twentieth century, competition among foreign powers for Africa's resources, land and strategic influence has continued through investment, loans, military cooperation and international trade agreements. These developments have generated debates about whether current foreign involvement promotes development or represents a continuation of external influence over African affairs.

The leaders of Nabi Community have expressed concern that several foreign companies control the area's major mineral resources while local communities remain poor, unemployed and excluded from important decisions. A stakeholders' forum has been organised to identify historical lessons that can guide the community in protecting its resources while promoting sustainable development.

Task

a) Evaluate the motives behind the nineteenth-century Scramble for Africa.

Problem Statement

Foreign companies monopolize Nabi community's valuable mineral resources while local citizens suffer from extreme poverty, high unemployment, and total decision-making exclusion.

Introduction

The nineteenth-century Scramble for Africa was driven by rapid European industrial expansion, creating a desperate search for raw materials and global strategic territories. Concurrently, emerging Pan-African ideas cultivated unified intellectual responses demanding dignity and self-determination. Although twentieth-century political independence was achieved, aggressive competition by foreign powers for Africa's land and mineral wealth persists through subtle loans and trade pacts. Historical analysis provides tools to protect local resource sovereignty.

Body

- One major motive for the Scramble for Africa was economic interest, driven by the Industrial Revolution in Europe which created a high demand for raw materials and new markets. European powers such as Britain, France and Germany sought Africa's resources like cotton, rubber, gold, palm oil and diamonds to feed their growing industries. Africa was also seen as a potential market for manufactured goods. This economic motivation made Africa attractive as a source of cheap raw materials and profitable investment opportunities, leading to intensified competition and colonisation.
- Another key motive was political and strategic competition among European powers. Countries wanted to increase their prestige, power and global influence by acquiring overseas territories. Possessing colonies was seen as a symbol of national strength. For example, rivalry between Britain and France, especially after the Fashoda Incident, shows how competition for territorial control intensified the scramble. This political rivalry pushed European states to occupy Africa quickly to avoid being overtaken by rivals.
- The search for new markets for surplus industrial goods also motivated European expansion into Africa. Industrialisation had led to overproduction in Europe, and African territories were seen as potential consumers of manufactured goods. Colonies were therefore necessary to ensure continuous demand for European products. This economic pressure encouraged European powers to establish control over African societies to secure guaranteed markets.
- Humanitarian and religious motives were also used to justify the Scramble for Africa. European missionaries claimed they wanted to spread Christianity, end the slave trade and introduce "civilisation" to African societies. Although these motives were often presented as moral, they were sometimes used to disguise economic and political ambitions. Missionary activities, however, did contribute to the establishment of colonial rule by paving the way for European influence in African interior regions.
- Strategic military and naval interests also influenced the scramble, especially the desire to control key ports, trade routes and coaling stations. European powers sought to secure positions along the African coast to protect their maritime trade routes to Asia and other parts of the world. For example, Britain's interest in Egypt was linked to protecting the Suez Canal, which was vital for trade with India. This strategic control strengthened European dominance over global trade routes.
- Technological advancements in transport and military equipment encouraged European expansion into Africa. The development of steamships, railways, the telegraph and advanced weapons like the Maxim gun made it easier for Europeans to penetrate and control African territories. These technologies gave Europeans a military advantage over African societies, making colonisation more feasible and rapid.
- National prestige and rivalry also played a significant role in motivating colonisation. European leaders believed that acquiring African colonies increased their country's status among world powers. Public opinion and nationalist sentiments in Europe pushed governments to expand their empires. This created pressure for rapid territorial acquisition, especially during the Berlin Conference period.
- The weakening of African states due to internal divisions, conflicts and lack of unity also encouraged European expansion. Many African societies were politically fragmented, which made it easier for Europeans to exploit divisions and establish control. Although resistance existed in many areas, lack of coordination among African societies reduced their ability to effectively resist colonisation, facilitating the scramble.

(b) Explain how the historical lessons from the Scramble for Africa can be applied to address the concerns raised in Nabi Community.

- The lesson of economic exploitation during the Scramble for Africa shows that reliance on foreign companies without strong local control can lead to resource extraction with little benefit to local communities. Nabi Community should ensure that agreements with foreign companies include fair revenue sharing and local reinvestment. This would prevent a situation where resources are taken out while the community remains poor, as described in the scenario.
- The importance of strong political control over resources during colonisation highlights the need for Nabi Community to strengthen local governance structures. Community leaders should participate in decision-making about mineral exploitation. This would ensure that external investors do not dominate resource management, protecting local interests and reducing exclusion.
- The Scramble for Africa demonstrates how division weakens societies and makes them vulnerable to external control. Nabi Community should promote unity among residents and stakeholders to ensure a common position when negotiating with foreign companies. Unity would increase bargaining power and reduce exploitation.
- Historical resistance to colonial rule shows the importance of organised collective action. Nabi Community can form strong community associations or cooperatives to represent local interests in negotiations with foreign investors. This would ensure that the community speaks with one voice and gains better outcomes in resource management.
- The role of unequal treaties during colonisation shows the danger of agreements signed without full understanding or fair negotiation. Nabi Community should ensure transparency and legal oversight in all agreements with foreign companies. Independent legal advice can help protect community rights and prevent unfair exploitation.
- The lesson of resource control during colonial expansion shows that lack of local participation leads to marginalisation. Nabi Community should ensure that local people are employed and trained in mining operations. This would increase employment opportunities and reduce poverty in the area.
- The importance of education and awareness during the colonial period highlights the need for community sensitisation. Residents of Nabi should be educated about their rights regarding natural resources and investment agreements. This would empower them to demand accountability from foreign companies.
- The legacy of colonial exploitation shows the importance of sustainable development planning. Nabi Community should ensure that resource extraction is balanced with environmental protection and long-term benefits such as infrastructure development. This would ensure that mineral wealth contributes to lasting community development rather than short-term external gain.

Conclusion

The nineteenth-century scramble demonstrates that unregulated foreign extraction drains local wealth and traps indigenous communities in structural poverty. Resource sovereignty requires strict state and community oversight. By enforcing local equity mandates, processing minerals domestically, and institutionalizing democratic vetoes over mining leases, Nabi can safeguard its ecological wealth and transform minerals into sustainable community development.

Item 6

European colonial powers established different systems of administration to strengthen their control over Africa after the Scramble and Partition. Different colonial administrations adopted varying approaches in governing their territories, which influenced interactions between colonial authorities and African societies. African communities also responded in different ways, including resistance, negotiation and collaboration. These experiences shaped colonial governance and had long-term effects on political developments in many African regions.

As colonial rule expanded, administrative systems influenced African political institutions, economic activities and social relations in various ways. Over time, debates emerged regarding the effectiveness of different colonial approaches, particularly in relation to participation in decision-making and the management of local affairs. These experiences contributed to growing demands for political change in many colonies.Residents of Ukera District have criticised their local administration for introducing development programmes without consulting communities, resulting in poor implementation, public dissatisfaction and increasing mistrust between leaders and citizens. District authorities have organised a governance dialogue to identify historical approaches that can strengthen community participation and improve service delivery.

Task:

a) Analyse the shift in French colonial administrative policies.

Problem Statement

Ukera district faces severe public dissatisfaction and rising citizen mistrust due to local authorities introducing major development programs without community consultation.

Introduction

Following the partition of Africa, European colonial powers established varying administrative frameworks to enforce territory control and resource extraction. These governance structures influenced political institutions, economic production, and community interactions across the continent. While some policies focused on direct assimilation, others utilized indirect rule, shaping local decision-making and sparks of resistance. Analyzing these historical administrative shifts yields critical insights for improving modern community inclusion, public transparency, and local accountability.

Body

- French colonial administration initially operated under the policy of assimilation, which aimed at transforming Africans into French citizens by imposing French language, culture, laws and values. The French believed that Africans could become "French" if they adopted European civilisation. This policy was mainly applied in urban centres such as Dakar and parts of Senegal. However, it had limited success because it ignored African cultural realities and was only applied to a small elite group.
- Assimilation required Africans to abandon their traditional institutions and fully adopt French systems of governance and education. African elites who were educated in French schools were expected to behave like French citizens and participate in French political life. In practice, this policy created a small privileged class but excluded the majority of Africans from meaningful participation in colonial administration.
- Due to the limitations and high cost of assimilation, the French gradually shifted to the policy of association. This policy recognised that Africans could not be fully transformed into French citizens and therefore allowed limited respect for African customs and institutions. Instead of replacing African systems, the French began to govern indirectly through selected traditional leaders.

- Association involved working with African chiefs and rulers to administer colonies under French supervision. These local leaders were incorporated into the colonial system but remained subordinate to French authority. This reduced administrative costs and made governance more effective across large territories such as French West Africa.
- The shift also reflected practical challenges faced by the French, including resistance from African societies and the diversity of cultures across colonies. It became clear that imposing a uniform French culture was unrealistic. As a result, association allowed for more flexible administration that accommodated local conditions while maintaining overall colonial control.
- Under association, African traditional institutions were partially preserved but heavily controlled by colonial authorities. Chiefs lost independence and were required to implement French policies such as tax collection and labour recruitment. This undermined their legitimacy and sometimes created tension between colonial administrators and African communities.
- The shift in policy also led to the development of indirect administrative structures where French officials supervised African administrators. Although Africans were involved in governance, decision-making power remained firmly in the hands of French authorities. This ensured continued exploitation of African resources while reducing administrative resistance.
- Over time, the shift from assimilation to association revealed the colonial objective of maintaining control rather than integrating Africans as equals. It demonstrated a pragmatic adjustment in policy driven by administrative efficiency, cost reduction and political control rather than genuine respect for African societies.

(b) Explain how lessons from these administrative experiences can be applied to improve governance in Ukera District.

- The failure of assimilation to include the majority of Africans in decision-making shows the importance of inclusive governance. Ukera District should ensure that all communities are involved in planning and implementing development programmes. This would reduce dissatisfaction caused by top-down decision-making, as seen in the scenario.
- The lesson from association, where local leaders were involved in administration, shows the importance of decentralisation. Ukera authorities should delegate responsibilities to local councils and community leaders who understand local needs. This would improve service delivery and increase public trust.
- The colonial experience shows that ignoring local customs leads to resistance and inefficiency. Ukera District should incorporate local knowledge and community practices into development planning. This would ensure that programmes are culturally appropriate and more acceptable to residents.
- The use of indirect rule highlights the importance of collaboration between central authorities and local leaders. Ukera District should strengthen partnerships between district officials and community representatives to ensure smooth implementation of policies. This would reduce mistrust between leaders and citizens.
- The colonial problem of poor communication between rulers and the governed shows the need for transparency. Ukera District should improve communication by regularly informing citizens about development plans and progress. This would reduce rumours, misunderstandings and public dissatisfaction.
- The limitations of assimilation demonstrate the dangers of imposing policies without consultation. Ukera District should adopt participatory planning approaches where citizens contribute ideas before decisions are made. This would improve ownership of projects and reduce failure rates.
- The experience of African resistance to colonial administration shows that exclusion leads to conflict and non-cooperation. Ukera District should promote dialogue platforms where grievances can be addressed peacefully. This would strengthen cooperation between leaders and communities.

- The shift from assimilation to association shows that flexibility in governance improves efficiency. Ukera District should adapt policies based on community feedback and changing conditions rather than rigid top-down approaches. This would ensure more effective and sustainable service delivery.

Conclusion

Historical colonial administration proves that centralized, top-down governance without local consultation causes intense public alienation and systemic project failure. Sustainable administration requires deep participatory democracy. By shifting toward consultative leadership, creating citizen oversight boards, and opening financial books to public scrutiny, Ukera district can eliminate mistrust and build highly responsive public services.

Item 7

The growth of Pan-Africanism emerged as an intellectual and political movement that brought together Africans and people of African descent across different regions. It developed alongside African nationalism, which later evolved into organised political movements in various territories. Over time, these ideas influenced political thought and shaped debates on identity, governance and collective action across the continent.

Following independence, many African states established their own governments but continued to face challenges related to ethnic divisions, regional cooperation and uneven economic development. These challenges have often affected efforts aimed at strengthening continental integration despite the existence of regional organisations and cooperation frameworks among African countries.

The youth of Kasi have become increasingly divided along ethnic and political lines, resulting in frequent conflicts that undermine community development initiatives. Community leaders have organised a youth convention aimed at promoting unity, shared identity and peaceful cooperation using lessons from Africa's liberation history.

Task

(a) Assess the contribution of Pan-Africanism to Africa's struggle for independence.

Problem Statement

Kasi's youth are deeply divided along political and ethnic lines, resulting in frequent violent conflicts that paralyze vital community development initiatives.

Introduction

Pan-Africanism emerged as a profound intellectual and political movement uniting global Africans against colonial exploitation and racial oppression. Operating alongside early nationalism, it successfully coordinated liberation struggles, asserted black dignity, and advanced continental integration frameworks. Post-independence states inherited artificial borders, resulting in deep ethnic fragmentation and uneven economic developments. Applying foundational Pan-African principles of solidarity offers modern communities' robust strategies to dismantle internal divisions and promote harmony.

Body

- Pan-Africanism provided ideological unity among Africans by promoting the idea that all people of African descent shared a common history of oppression and should work together for liberation. This helped to overcome colonial-imposed divisions such as ethnicity and regional boundaries. Leaders like W.E.B. Du Bois and Marcus Garvey inspired Africans to see independence as a collective struggle rather than isolated national efforts. This strengthened nationalist movements across the continent by creating a shared consciousness of resistance against colonial rule.

- Pan-Africanism contributed to the formation and strengthening of nationalist movements in various African colonies. It encouraged political organisation and mobilisation against colonial governments by linking local struggles to broader continental aspirations. For example, Kwame Nkrumah in Ghana drew heavily on Pan-African ideas to mobilise mass support for independence. This helped to accelerate decolonisation by uniting political leaders and citizens under common goals.
- The movement facilitated international advocacy for African independence by raising awareness in global forums. Pan-African conferences and organisations provided platforms where African leaders could present grievances against colonial rule. These gatherings attracted global attention and increased pressure on colonial powers to grant independence. This external support strengthened internal liberation struggles.
- Pan-Africanism encouraged solidarity among African leaders, leading to cooperation in anti-colonial struggles. Leaders supported each other morally, politically and sometimes materially in their resistance efforts. For example, independent African states such as Ghana provided support to liberation movements in Southern Africa. This solidarity helped sustain liberation struggles in colonies still under European control.
- The ideology promoted cultural pride and rejection of colonial inferiority complexes, which strengthened resistance movements. Africans were encouraged to value their identity, history and traditions rather than adopt European cultural superiority. This cultural awakening boosted confidence among nationalist leaders and communities, making resistance to colonial rule more determined and sustained.
- Pan-Africanism contributed to the formation of continental organisations such as the Organisation of African Unity (OAU), which, although established after independence, had roots in earlier Pan-African thought. These organisations supported liberation movements in remaining colonies like Angola, Mozambique and South Africa. This extended the struggle for independence beyond individual countries to a continental level.
- The movement provided intellectual frameworks that linked political independence with economic independence. Pan-African thinkers argued that political freedom without economic control would be incomplete. This inspired nationalist leaders to demand full sovereignty rather than limited self-government. This strengthened the push for complete decolonisation.
- Pan-Africanism helped to inspire mass participation in liberation struggles by encouraging ordinary Africans to view independence as their collective responsibility. Through speeches, writings and political activism, leaders mobilised workers, students and rural populations to join resistance movements. This broad participation increased pressure on colonial governments and made it difficult to sustain colonial rule.

(b) Suggest how the principles of Pan-Africanism can be applied to promote unity in Kasi.

- promoting a shared identity among youth in Kasi can reduce ethnic and political divisions. Pan-Africanism teaches that unity is based on common identity rather than differences. Community leaders can organize civic education programs that emphasize that all youth belong to one community with shared development goals. This would reduce hostility and encourage cooperation in development activities.
- Establishing youth forums that encourage dialogue and cooperation can help resolve misunderstandings peacefully. Pan-African principles emphasize collective decision-making and solidarity. Regular meetings where youth from different groups discuss community issues can reduce suspicion and build trust. This would directly address frequent conflicts mentioned in the scenario.
- Encouraging collective participation in community development projects can strengthen unity. When youths work together in activities such as cleaning, construction and entrepreneurship

projects, they develop shared responsibility. Pan-Africanism promotes collective action for common progress, which would help reduce divisions in Kasi.

- Promoting leadership based on inclusivity rather than ethnic or political affiliation can improve harmony. Leaders should be selected based on merit and ability to represent all groups fairly. This reflects Pan-African ideals of equality and unity, reducing favoritism and resentment among youth.
- Introducing cultural exchange activities among different groups in Kasi can help reduce stereotypes and build mutual respect. Pan-Africanism encourages appreciation of African diversity within unity. Cultural events, sports and arts programs can bring youth together and reduce ethnic tensions.
- Strengthening education on liberation history can inspire youth to value unity and cooperation. Learning about Africa's anti-colonial struggles shows how unity was essential for independence. This would encourage Kasi youth to abandon divisions and focus on shared development goals.
- Encouraging cooperation through youth-led organisations can institutionalize unity efforts. Pan-Africanism supports organized collective action, so youth groups can be formed to address community issues jointly. This would reduce fragmentation and promote sustained collaboration.
- Promoting conflict resolution mechanisms based on dialogue and reconciliation can help address disputes peacefully. Pan-African principles emphasize solidarity and peaceful coexistence. Establishing mediation committees for youth conflicts would reduce violence and strengthen long-term unity in Kasi.

Conclusion

Pan-African history demonstrates that collective progress is entirely impossible under systems of narrow ethnic fragmentation and political polarization. Lasting peace requires intentional solidarity and shared identity. By establishing inter-ethnic economic cooperatives, introducing peace education, and creating inclusive youth councils, Kasi can dismantle tribal biases, restore social stability, and unlock its full development potential.

Item 8

Many African countries experienced separatist conflicts and civil wars after independence, which affected political stability and social cohesion in different regions. These conflicts occurred in various historical and geographical contexts and involved both internal and external actors, leading to prolonged periods of instability in some states. At the same time, Pan-African leaders continued to emphasise peaceful coexistence, inclusive governance and cooperation among African states as important considerations for sustainable peace and development.

Conflicts such as those in Sudan (1955–1972 & 1983–2005), Rwanda (1990–1994), Nigeria (1967–1970) and the Democratic Republic of Congo (1960–1965) highlighted the complexity of maintaining national unity in the post-independence period. Over time, different approaches to conflict resolution were attempted by governments, civil society organisations, religious leaders and local communities, including dialogue, reconciliation and resource-sharing arrangements.

Recently, disagreements over unfair allocation of district revenue have created tensions among different communities in Megha District, leading to protests, destruction of property and declining trust in local authorities. A peace conference has been convened to identify practical measures that can restore harmony and strengthen inclusive governance.

Task

(a) Analyse the causes of the post-independence conflicts mentioned in the scenario.

Problem Statement

Megha district faces violent protests, property destruction, and total authority mistrust stemming from bitter community disagreements over unfair revenue allocations.

Introduction

Post-independence Africa was heavily impacted by intense separatist conflicts, military coups, and civil wars that fractured national cohesion. These internal crises emerged from complex historical contexts, involving deep resource-sharing disputes, structural inequalities, and external geopolitical interference. Despite prolonged instability, Pan-African leaders continuously championed structured dialogue, reconciliation, and inclusive governance. Deploying these historical conflict resolution frameworks is crucial for resolving modern regional revenue crises and restoring civic trust.

Body

- One major cause of post-independence conflicts in states such as Sudan, Rwanda, Nigeria and the Democratic Republic of Congo was ethnic and regional divisions that were often inherited or intensified by colonial boundaries. These divisions created competition for political power and state resources after independence, as different groups feared domination by others. For example, in Nigeria, tensions between the Hausa-Fulani, Yoruba and Igbo contributed to the outbreak of the civil war (1967–1970). Such divisions weakened national unity and created conditions for prolonged instability.
- Weak political institutions after independence contributed significantly to conflicts in many African states. Many governments lacked strong democratic systems, independent judiciaries and effective administrative structures. This led to struggles for power, authoritarian rule and disputed legitimacy. In Sudan, weak governance structures failed to manage tensions between the north and south, contributing to prolonged civil war. This institutional weakness made it difficult to resolve grievances peacefully.
- Competition for control of state resources and unequal distribution of wealth was another key cause of conflict. In many countries, certain regions or groups felt marginalised in access to land, employment and government services. This created resentment and rebellion against central governments. In the Democratic Republic of Congo, disputes over mineral resources and economic control fuelled prolonged instability. Unequal development therefore deepened tensions and encouraged armed conflict.
- Colonial legacies played a major role in post-independence conflicts by creating artificial boundaries that grouped hostile communities together. These boundaries ignored ethnic, cultural and historical realities, making national integration difficult. In Rwanda, colonial policies that favoured certain ethnic groups over others contributed to long-term hostility between Hutu and Tutsi communities, culminating in the 1994 genocide. This shows how colonial manipulation of identities created lasting instability.
- Power struggles among political elites also contributed to conflicts as leaders competed for control of newly independent states. In many cases, elections were contested or governments were overthrown through coups, leading to instability. In Nigeria, military coups and counter-coups weakened political stability before and during the civil war. These struggles undermined democratic governance and escalated tensions into armed conflict.
- External interference and Cold War politics intensified some of the conflicts in Africa. Superpowers supported rival groups or governments based on ideological interests rather than national unity. In the Democratic Republic of Congo, foreign involvement during the early post-independence crisis contributed to prolonged instability. This external influence worsened internal divisions and prolonged conflicts.
- Failure to establish inclusive governance systems that represented all groups led to feelings of exclusion and marginalisation. When certain communities felt left out of decision-making processes, they resorted to rebellion or separatist movements. In Sudan, exclusion of southern

populations from political participation contributed to civil war. This lack of inclusivity weakened national cohesion.

- Poor management of national identity and lack of unity-building policies contributed to fragmentation in many post-independence states. Governments often failed to promote shared national identity over ethnic loyalties. This allowed ethnic nationalism to dominate politics, increasing tensions and mistrust among communities. As a result, national unity remained fragile and conflicts became more likely.

(b) Explain how lessons from these conflicts can be applied to address the challenges in Megha District

- The lesson of ethnic and regional divisions shows the importance of promoting inclusive governance in Megha District. Local authorities should ensure that all communities are fairly represented in decision-making and revenue allocation processes. This would reduce resentment and prevent protests caused by perceptions of unfair treatment, as described in the scenario.
- Weak institutions in post-independence conflicts demonstrate the need for strong, transparent local governance structures. Megha District should strengthen accountability mechanisms to ensure fair distribution of district revenue. This would rebuild trust in local authorities and reduce suspicion among communities.
- The experience of resource-based conflicts in countries like the DRC shows the importance of equitable distribution of resources. Megha District should develop clear and fair revenue-sharing formulas that benefit all communities. This would reduce tensions and prevent destruction of property caused by perceived inequality.
- The role of exclusion in post-independence conflicts highlights the importance of participatory decision-making. Community members should be involved in budgeting and planning processes to ensure transparency. This would increase ownership of decisions and reduce resistance to district policies.
- The lesson of political elite struggles shows the need for peaceful dialogue in resolving disagreements. Megha District should establish dialogue platforms where grievances about revenue allocation can be addressed without violence. This would help restore trust and prevent escalation of conflict.
- The impact of weak national identity in conflicts shows the importance of promoting unity among communities. Megha District should encourage shared identity through civic education and community activities. This would reduce divisions and promote cooperation in development initiatives.
- The experience of external interference in African conflicts highlights the need for internal conflict resolution mechanisms. Megha District should rely on local mediation committees, elders and civil society organisations to resolve disputes. This would ensure sustainable peace based on local ownership.
- The lesson of post-conflict reconciliation shows the importance of restoring relationships after violence. Megha District should organise peacebuilding and reconciliation programmes to heal divisions caused by protests and destruction of property. This would rebuild trust and support long-term stability.

Conclusion

Post-independence conflicts prove that centralized resource hoarding and unfair economic marginalization inevitably explode into violent societal collapse. Sustainable harmony demands inclusive governance and absolute fiscal equity. By institutionalizing a transparent, mathematical revenue-sharing formula, initiating elder mediation, and opening accounts to public audit, Megha district can completely neutralize tensions and rebuild civic trust.

P210/2: P210/2: HISTORY OF WORLD AFFAIRS SINCE 1789.

CONSTRUCT THREE; REVOLUTIONS AND THEIR IMPACT ON THE WORLD

ITEM 1

The Eastern Question between 1831 to 1913 referred to conflicts in the Ottoman Empire that attracted the attention of the big powers of Europe to get involved. Among them included: the Syrian crisis of 1831 to 1841 that was solved by the Straits Convention of 1841, the Crimean war of 1854-1856 that ended in the signing of the Paris Peace treaty, the Berlin Congress of 1878 and the Balkan wars of 1908 - 1913.The above conflicts were intensified by the rivalries between Russia that claimed to be the guardian of all the slav peoples and all Orthodox Christians in the Ottoman empire, and on the other hand Britain which was much interested in her commercial dealings where certain territories in the empire were important such as the Straits of Bosphorous and Darderelles. The aggressive nature of the big powers left the empire in the declining state. No wonder from the beginning of the 19th Century it was referred to as a "Sick Man of Europe. "Among the outcomes of conflicts in the empire included: death of people, disruption of peace among others.

In modern world today super powers such as China has continued to claim that Taiwan a small state is under her control and that it is a renegade province, however Taiwan maintains that it's an independent, self-ruling democracy. This situation has therefore created tensions and conflicts between the two countries threatening to break out into war. This has therefore raised concerns among world leaders especially USA and countries in the Far East to come up with conferences to discuss the end of the conflicts.

Task.

a) Analyse the negative impact of the Eastern Question as presented in the scenario.

Problem statement/challenge

The problem in the scenario is the escalation of the China-Taiwan conflict which is as a result of unresolved territorial claims and competing political identities that threaten regional and global stability.

Introduction

- The Eastern Question was a major geopolitical issue in the nineteenth and early twentieth centuries that exposed the weakness of the Ottoman Empire and drew in the rivalries of the European powers. Between 1831 and 1913, conflicts such as the Syrian crisis, the Crimean War, and the Balkan wars highlighted the empire's declining strength and its vulnerability to foreign interference. Russia's ambition to protect Slavic peoples and Orthodox Christians clashed with Britain's commercial interests in strategic territories like the Bosphorus and Dardanelles, intensifying tensions. These struggles not only destabilized the Ottoman Empire but also disrupted peace, caused widespread suffering, and earned it the label "Sick Man of Europe." The negative impacts of these conflicts illustrate how external rivalries and internal weaknesses combined to accelerate the empire's decline. The Eastern Question produced a wide range of negative effects on the Ottoman Empire beyond the loss of life and disruption of peace.

Body

- One major impact was the weakening of the empire's political authority. Constant interference by European powers eroded the sovereignty of the Ottoman rulers, leaving them unable to make independent decisions and forcing them to rely on external agreements such as the Straits Convention and the Paris Peace Treaty. This undermined confidence in the empire's leadership and accelerated its decline.

- Economically, the repeated conflicts drained the empire's resources and disrupted trade. Strategic territories like the Bosphorus and Dardanelles, which were vital for commerce, became contested zones, reducing the empire's ability to benefit from its geographical position. The destruction caused by wars also damaged agriculture and local economies, leaving populations impoverished and dependent on foreign powers.
- The rivalries between Russia and Britain deepened divisions within the empire. Russia's claim to protect Slavic peoples and Orthodox Christians encouraged separatist movements, while Britain's commercial ambitions created resentment among local populations who felt exploited. These divisions weakened social cohesion and fueled uprisings that further destabilized the empire.
- Diplomatically, the Ottoman Empire's reputation as the "Sick Man of Europe" meant it was increasingly marginalized in international affairs. European powers treated it as a declining state to be carved up rather than a partner to be respected. This loss of prestige reduced its influence in global politics and made it vulnerable to manipulation.
- The repeated wars and instability created long-term insecurity for ordinary people. Families were displaced, famine became more frequent, and communities lived under constant fear of conflict. The human suffering caused by the Eastern Question left deep scars on the population and contributed to the empire's eventual collapse.
- There was the widespread loss of life during conflicts such as the Crimean War and the Balkan Wars. These wars not only caused deaths among soldiers but also devastated civilian populations, leaving families displaced and communities destroyed.
- Another impact was the disruption of peace and stability within the empire. Constant wars and uprisings weakened the Ottoman government's ability to maintain order, creating insecurity across its territories. This instability discouraged economic growth and made it difficult for ordinary people to live and work in peace.
- The involvement of European powers further undermined the sovereignty of the Ottoman Empire. Britain, Russia, and other states interfered in Ottoman affairs to protect their own strategic and commercial interests, particularly in regions like the Straits of Bosphorus and Dardanelles. This foreign interference weakened the empire's independence and contributed to its decline.
- The eastern question weakened national unity in the empire, as different ethnic and religious groups within the empire increasingly sought independence or protection from foreign powers. This fragmentation eroded the empire's cohesion and made it more vulnerable to external manipulation.
- Constant crises created diplomatic instability. The empire became a subject of negotiation and bargaining among European powers, with its territories often discussed as prizes to be divided. This undermined its position in international diplomacy and reduced its ability to act as an independent state.
- Finally, the prolonged instability weakened the empire's cultural and intellectual development. Resources that could have been invested in education, infrastructure, and modernization were instead consumed by war and political struggles. As a result, the Ottoman Empire lagged behind Europe in modernization, which deepened its decline and reinforced its image as the "Sick Man of Europe."
- In conclusion, the Eastern Question left the Ottoman Empire weakened, fragmented, and vulnerable to both internal uprisings and external manipulation. The repeated wars, foreign interference, economic decline, and loss of sovereignty not only eroded the empire's stability but also damaged its reputation, earning it the label "Sick Man of Europe."

b) Recommend strategies drawn from it that can be used to resolve the China- Taiwan conflict.

- The China–Taiwan conflict, much like the Eastern Question of the nineteenth century, reflects the dangers of unresolved territorial disputes and great power rivalries. While the Ottoman Empire's decline was accelerated by external interference, internal divisions, and constant wars, modern powers can learn from these mistakes to prevent escalation in East Asia. The tensions between China, which claims Taiwan as a renegade province, and Taiwan, which insists on its independence, have already drawn international attention and concern. To avoid a repeat of the destructive outcomes seen in the Ottoman Empire, strategies must focus on diplomacy, respect for sovereignty, economic cooperation, and regional stability. These lessons provide a foundation for building peaceful solutions that safeguard both national interests and global security.
- First, diplomacy and international dialogue should be prioritized over military confrontation. Just as the Straits Convention and the Berlin Congress attempted to manage tensions in the Ottoman Empire, modern conferences involving China, Taiwan, and key global powers could provide platforms for negotiation, compromise, and peaceful settlement.
- Respect for sovereignty and self-determination must be emphasized. The Ottoman Empire's decline was accelerated by constant foreign interference and disregard for its autonomy. In the case of China and Taiwan, external powers should avoid fueling tensions and instead encourage both sides to engage in direct dialogue that respects the rights and aspirations of their people.
- Economic cooperation can also be used as a stabilizing force. The Ottoman Empire suffered economic decline due to disrupted trade and resource struggles. China and Taiwan could instead focus on building mutually beneficial economic ties, reducing hostility by creating shared interests in prosperity and stability.
- Regional alliances should be managed carefully to prevent rivalries from escalating. The Eastern Question showed how Russia and Britain's competing ambitions destabilized the Ottoman Empire. Similarly, the involvement of the United States and other East Asian countries in the China–Taiwan issue should be balanced to avoid turning the conflict into a proxy struggle that worsens tensions.
- Confidence-building measures such as cultural exchanges, joint development projects, and agreements on non-aggression can help reduce mistrust. The Ottoman Empire's failure to maintain internal unity contributed to its collapse; China and Taiwan can avoid this by fostering dialogue and cooperation that bridge divides rather than deepen them.
- Establishment of binding international agreements that guarantee peace and stability. The Ottoman Empire suffered because treaties often favored external powers rather than protecting its sovereignty. In the modern context, China and Taiwan could benefit from agreements that respect Taiwan's democratic governance while acknowledging China's concerns, thereby reducing the risk of war.
- Strengthening regional security frameworks is also crucial. The Ottoman Empire was destabilized by rivalries between Russia and Britain, which turned its territories into battlegrounds. To avoid a similar fate, East Asian countries and global powers should work together to create mechanisms that prevent the China–Taiwan issue from becoming a proxy conflict.
- Both sides should focus on inclusive economic development. The Ottoman Empire's decline was worsened by economic disruption and neglect of local populations. By ensuring that trade, investment, and technological cooperation benefit ordinary citizens on both sides, China and Taiwan can reduce grievances and create incentives for peace rather than conflict.
- Therefore, by avoiding the mistakes that weakened the Ottoman Empire, such as constant warfare, external manipulation, and neglect of internal unity, China, Taiwan, and the wider international community can work toward peaceful solutions that safeguard stability in East Asia.

ITEM 2

Europe between 1789 to 1848 experienced mass revolutions that brought political changes. In 1789, the French revolution broke out in France under the leadership of king louis xvi who ruled under the Bourbon Monarchy since 1774. He had married an Austrian princess, Marie Antonette. The revolution happened in three phases namely; the events, the reign of terror 17921794 and the Directory government 1795-1799. In 1848, Europe witnessed the outbreak of series of nationalistic revolutions that started in France and later spread to the Austrian Empire, Italian states and other Germany states. Therefore, major cities like Budapest, Paris, Vienna, Sicily, among others experience massive uprising against the existing the autocratic leaders. Only Britain and Belgium survived these revolutions. Among the causes of these uprising included; rise of nationalism, financial crisis, poor harvests among others. Chamata is African country that has experienced internal uprising by her people against the ruling government and this has contributed to loss of lives, Economic disruption and others. The African leaders have expressed the concern about the political situation in the country which may results into a major violent uprising if not solved on time. They are therefore organizing a conference to help come up with the solutions to the problem.

Task

(a) Analyze the causes of the revolutions in Europe between 1789 to 1848 as seen in the scenario.

Problem statement/challenge

The problem in the scenario is that there is rising dissatisfaction with autocratic leadership, economic hardship, and social inequality and the government's failure to respond effectively to these grievances may lead to outbreak of instability.

Introduction.

Europe between 1789 and 1848 was a continent in turmoil, marked by waves of revolutionary movements that reshaped its political and social landscape. Beginning with the French Revolution of 1789, which challenged the Bourbon monarchy under King Louis XVI, and culminating in the widespread nationalistic revolutions of 1848, these uprisings were fueled by deep-rooted grievances. Economic hardships such as financial crises and poor harvests, combined with social inequalities and the rise of nationalist sentiments, created fertile ground for mass unrest. The revolutions spread across major cities like Paris, Vienna, Budapest, and Sicily, sparing only Britain and Belgium, and highlighted the growing demand for political reforms, constitutional governance, and civil rights. These revolutions were as a result of the following.

Body

- One major cause was the rise of nationalism, as different peoples across Europe sought independence and self-determination from autocratic rulers and foreign domination. This was particularly evident in the uprisings in the Austrian Empire, Italian states, and German states, where national identity became a powerful mobilizing force.
- Economic hardship also played a critical role. Financial crises, poor harvests, and food shortages created widespread suffering among the population, fueling anger against ruling elites who were seen as indifferent to the plight of ordinary citizens. These conditions made people more willing to challenge the existing order in search of better living standards.
- Political oppression under autocratic regimes further intensified discontent. Monarchs such as King Louis XVI in France ruled with little regard for popular participation, and the lack of political freedoms pushed citizens to demand reforms. The French Revolution, for example, was sparked by resentment against the Bourbon monarchy's excesses and lack of accountability.

- Social inequality was another significant factor. The rigid class structures in many European states, where aristocrats and landlords enjoyed privileges while peasants and workers faced exploitation, created resentment that fueled revolutionary movements. The abolition of such entrenched hierarchies became a central demand during these uprisings.
- The spread of revolutionary ideas across Europe inspired mass movements. The success of the French Revolution encouraged other nations to rise against their rulers, while the ideals of liberty, equality, and fraternity resonated widely. This ideological influence helped transform local grievances into continent-wide revolutions that reshaped Europe's political landscape.
- Industrialization also played a role, particularly in the later revolutions. The growth of factories created new social classes, such as the urban working class, who faced poor working conditions and low wages. Their frustrations added momentum to revolutionary movements, as they sought economic justice and improved living standards.
- The spread of revolutionary experiences across borders further fueled uprisings. The success of the French Revolution acted as a model, encouraging other nations to rise against autocratic rulers. The revolutions of 1848, for instance, were interconnected, with events in Paris inspiring uprisings in Vienna, Budapest, and other major cities.
- Another cause was the failure of governments to adapt to changing social and political realities. Autocratic leaders resisted reforms, clung to outdated systems, and ignored the grievances of their populations. This rigidity created resentment and made revolutions seem like the only viable path to change.
- Liberalism was a powerful force behind the revolutions in Europe between 1789 and 1848, as it championed ideas of individual freedoms, constitutional governance, and equality before the law. Many citizens, especially the middle class, were inspired by liberal ideals to challenge absolute monarchies and demand representative institutions that would protect civil rights and limit the power of rulers.
- Intellectuals played a crucial role in spreading revolutionary ideas. Writers, philosophers, and political thinkers influenced public opinion by criticizing autocratic governments and promoting concepts such as democracy, nationalism, and social justice. Their works provided the ideological foundation for mass movements and inspired people to believe that change was both possible and necessary.
- Strict press censorship by monarchies and autocratic regimes also fueled discontent. Governments attempted to silence dissenting voices and suppress revolutionary ideas, but this often backfired, as people saw censorship as an attack on their freedoms. The desire for free expression became a rallying cry, and underground publications helped spread revolutionary messages despite government restrictions.
- Natural calamities, such as poor harvests and famines, intensified the suffering of ordinary people and created fertile ground for uprisings. Food shortages led to hunger and rising prices, which made life unbearable for peasants and workers. These hardships exposed the inability of governments to respond effectively to crises, further eroding their legitimacy.
- The rise of socialism added another dimension to the revolutionary movements. Socialist thinkers highlighted the plight of the working class and called for economic reforms to reduce inequality. Their ideas appealed to industrial workers and peasants, who felt excluded from the benefits of economic progress, and helped broaden the revolutionary agenda beyond political freedoms to include social justice.
- The weakness of European governments was another critical factor. Many regimes were rigid, corrupt, and resistant to reform, which made them incapable of addressing the grievances of their citizens. Their inability to adapt to changing social and economic realities left them vulnerable to mass uprisings and ultimately contributed to their downfall.

- The influence of reform banquets in France also played a significant role in mobilizing revolutionary sentiment. These gatherings, disguised as social events, became platforms for political discussion and the spread of reformist ideas. They provided safe spaces for opposition groups to organize and build momentum, eventually leading to mass protests and uprisings that challenged the existing order.
- The growing demand for constitutionalism and civil rights was a powerful driver. Citizens across Europe wanted written constitutions, freedom of speech, and protection of individual rights. The absence of these freedoms under monarchies and empires created widespread dissatisfaction, which erupted into mass uprisings.
- **In conclusion**, the revolutions that swept across Europe between 1789 and 1848 were the product of a complex interplay of political, social, and economic forces. Liberalism, the influence of intellectuals, strict censorship, natural calamities, the rise of socialism, weak governments, and reform banquets all contributed to widespread unrest and demands for change. These factors combined to challenge autocratic rule and push for constitutional governance, civil rights, and social justice.

(b) Recommend the strategies African leaders can adopt to bring peace in Chamata

- Chamata's current political unrest mirrors the historical experiences of Europe between 1789 and 1848, where widespread revolutions were triggered by economic hardship, social inequality, strict censorship, and weak governance. To bring peace in Chamata, African leaders can adopt a multi-pronged strategy that addresses both immediate tensions and long-term stability as discussed below.
- They should prioritize inclusive dialogue by organizing peace conferences that bring together government officials, opposition groups, civil society, and community leaders. This ensures that all voices are heard and reduces feelings of exclusion that often fuel uprisings.
- Leaders should strengthen democratic institutions and promote constitutional reforms that guarantee political freedoms, accountability, and fair representation. This will help prevent the kind of autocratic rigidity that historically triggered revolutions in Europe.
- Economic stabilization measures are essential. By addressing unemployment, poverty, and inequality through investment in agriculture, infrastructure, and social services, leaders can reduce the economic frustrations that often drive people to revolt.
- Leaders should encourage freedom of expression and reduce strict censorship. Allowing citizens to voice concerns peacefully through media and public forums can prevent underground movements from turning violent.
- Regional cooperation should be enhanced. Neighboring countries and African Union mechanisms can provide mediation, monitoring, and support to prevent external interference and ensure that Chamata's crisis does not destabilize the wider region.
- Leaders should invest in social cohesion programs, such as education, cultural exchanges, and community reconciliation initiatives, to heal divisions and build trust among citizens. By combining political reforms, economic development, and social unity, African leaders can create a sustainable path to peace in Chamata and prevent the escalation of violent uprisings.
- They should also invest in early warning systems to detect signs of unrest before they escalate into violence. By monitoring community grievances, economic pressures, and political tensions, leaders can intervene proactively rather than reactively.
- They should promote inclusive governance by ensuring that marginalized groups, youth, and women are represented in decision-making processes. This reduces feelings of exclusion and builds trust between citizens and the state.

- Leaders should also prioritize transitional justice and reconciliation mechanisms to heal divisions caused by past uprisings. Truth commissions, community dialogues, and restorative justice programs can help rebuild social cohesion and prevent cycles of revenge.
- Strengthening regional and continental solidarity is equally vital. By involving the African Union and regional blocs, Chamata can benefit from mediation, peacekeeping support, and shared experiences from other countries that have overcome similar crises.
- Additionally, leaders can focus on security sector reforms to ensure that the military and police act as protectors of citizens rather than instruments of repression. Professionalizing these institutions builds confidence and reduces the likelihood of violent crackdowns.
- Finally, long-term investment in education and civic awareness is crucial. Educating citizens about their rights, responsibilities, and peaceful means of expressing dissent helps create a culture of dialogue rather than confrontation.
- Therefore, leaders of chamata must act decisively by fostering dialogue, promoting democratic reforms, strengthening institutions, and addressing economic grievances. By combining reconciliation efforts, regional cooperation, and investment in social cohesion, they can transform the current crisis into an opportunity for lasting peace and stability.

ITEM 3

Napoleon Bonaparte was born at Ajjacio, Corsica Island in the Italian State of Genoa on the 15th August 1769, one year after the state had been annexed by France. Many factors led to the rise of Napoleon to power in France but most importantly was the outbreak of the 1789 French revolution that created power vacuum after the death of important personalities such as King Louis XV, Maximillien Robspiere, Danton among others. After his rise to power in 1799, he embarked on a number of reforms both in domestic and foreign policies, among which included; Code Napoleon, education, strengthened the French military that expanded France's boundaries after defeating European powers such as Russia, Prussia by 1807, indeed by 1807 Napoleon had reached his peak, after defeating most of his neighbouring states. However, from then on wards, Napoleon's military power started declining facing several defeats such as the Peninsular wars of 1808 in which he was defeated by Spain and later in 1812, was disastrously defeated by Russia during the Moscow Campaign in which he lost over five t hundred thousand soldiers which greatly weakened him explaining his downfall by 1815.

In modern world today, Captain Ibrahim Traore the president of Burkina Faso took power in September 2022 through a military coup, overthrowing Paul Henri Damiba and quickly became one of the most loved and famous leaders in west Africa because of his reforms to the people.

However, despite his achievements, he has faced several assassinations attempts from within and outside the country, the constant rebel attacks from groups such as the Islamic State. These have all threatened to overthrow his government. Some military leaders in West Africa such as the president of Mali, Niger, Guinea are concerned about the situation in Burkina Faso that is threatening into outbreak of a conflict. They have therefore organized a conference to find ways of resolving the conflicts.

TASK

a) Examine the factors that led to the downfall of Napoleon Bonaparte from Power in France as presented in the scenario.

Problem statement/challenge

The problem in the scenario is leaders who rise to power through revolution and relay heavily on military power and rapid expansion of influence often encounter resistance, internal fatigue, and external opposition that can undermine their authority and threaten their survival in power.

Introduction

- Napoleon Bonaparte's downfall from power in France was the result of several interconnected factors that gradually eroded his military strength, political influence, and popular support. At the height of his power in 1807, Napoleon had defeated most of his neighboring states and expanded France's boundaries significantly. However, this rapid expansion created challenges that he could not sustain in the long run.
- One of the most critical factors was his military overstretch. The Peninsular War of 1808 marked the beginning of his decline, as Spanish resistance supported by Britain drained French resources and morale. This was followed by the disastrous Russian campaign of 1812, where Napoleon lost over half a million soldiers due to harsh winter conditions, poor planning, and Russian scorched-earth tactics. These defeats severely weakened his army and tarnished his reputation as an invincible commander.
- Another major factor was the overexpansion of his empire. By controlling vast territories across Europe, Napoleon stretched his military and administrative capacities too thin. This made it difficult to maintain stability and left him vulnerable to coordinated resistance from other European powers. Indeed, after his weakening in Russia, countries like Britain, Prussia, Austria, and Russia united more effectively against him, leading to decisive defeats such as the Battle of Leipzig in 1813.
- Domestically, Napoleon faced declining support as continuous wars drained France economically and socially. Heavy taxation, conscription, and the loss of countless lives created widespread discontent among the French population. His reliance on military solutions rather than diplomacy further alienated potential allies and increased opposition both at home and abroad.
- Napoleon's own leadership miscalculations played a role in his downfall. His ambition often led him to underestimate his enemies, and his insistence on invading Russia despite warnings was a strategic blunder that accelerated his decline. After successive defeats, he was forced to abdicate in 1814 and exiled to Elba. Though he briefly returned during the Hundred Days, his final defeat at the Battle of Waterloo in 1815 ended his rule permanently.
- The Continental System was one of Napoleon's major policies aimed at weakening Britain economically by forbidding European nations under his control from trading with it. However, this blockade backfired as it hurt France and its allies more than Britain, leading to economic hardship, smuggling, and resentment among European states. The failure of the system undermined Napoleon's credibility and contributed to his decline.
- Napoleon's imprisonment of the Pope also damaged his standing. By arresting Pope Pius VII and interfering with the Catholic Church, he alienated many devout Catholics across Europe. This act weakened his moral authority and created hostility among populations who viewed him as disrespectful to religion, further eroding his support base.
- The Moscow Campaign of 1812 was perhaps the most disastrous of Napoleon's ventures. His invasion of Russia ended in catastrophe when the Russian army employed scorched-earth tactics, burning supplies and retreating deeper into the country. Harsh winter conditions, starvation, and disease decimated his army, with over half a million soldiers lost. This defeat shattered his military strength and marked a turning point in his downfall.

- The Peninsular Wars in Spain and Portugal also drained Napoleon's resources. Spanish guerrilla fighters, supported by Britain, resisted French occupation fiercely. The prolonged conflict tied down large numbers of French troops, weakened morale, and exposed Napoleon's inability to suppress nationalist resistance, further diminishing his military dominance.
- Another factor was the desertion by his military commanders**.** As defeats mounted, many of his generals and allies lost confidence in his leadership and abandoned him. This lack of loyalty and cohesion within his ranks made it increasingly difficult for Napoleon to sustain his campaigns and defend his empire against united European coalitions.
- The nature and size of his empire played a crucial role in his downfall. Napoleon's empire stretched across much of Europe, but its vastness made it difficult to govern effectively. Diverse populations resisted French rule, and maintaining control required constant military presence. The overextension of resources and inability to manage such a large empire left him vulnerable to internal revolts and external attacks, hastening his collapse.
- Napoleon's overwhelming ambition was a double-edged sword. On one hand, it drove him to achieve remarkable military victories and expand France's influence across Europe. On the other hand, his relentless desire for dominance pushed him into risky ventures that ultimately backfired. His insistence on conquering Russia despite warnings from advisors is a prime example of how ambition clouded his judgment, leading to catastrophic losses that accelerated his downfall.
- The exhaustion and fatigue of both his army and the French population also played a significant role. Years of continuous warfare drained resources, weakened morale, and caused widespread suffering. Soldiers who had fought in multiple campaigns became weary and less effective, while civilians grew resentful of constant conscription and taxation. This fatigue eroded the strength of his military machine and undermined the loyalty of the people he ruled.
- Finally, British naval superiority was a persistent obstacle to Napoleon's ambitions. Despite his dominance on land, he could never match Britain's control of the seas. The Royal Navy's victories, such as the Battle of Trafalgar in 1805, ensured that Britain remained secure from invasion and able to support continental coalitions against him. Britain's naval blockade also crippled French trade and contributed to the failure of the Continental System, leaving Napoleon economically weakened and strategically isolated.
- In conclusion therefore, Napoleon's downfall was caused by a combination of military defeats, overexpansion, strong resistance from European coalitions, declining domestic support, and his own strategic errors. These factors together explain how a leader who once dominated Europe ultimately lost power and influence by 1815.

(b) Recommend the strategies West African leaders can adopt to avoid a decline of Captain Traore's government.

- To help prevent the decline of Captain Ibrahim Traoré's government, West African leaders can adopt the following strategies that strengthen stability, build legitimacy, and reduce external threats.
- They should prioritize regional cooperation and solidarity. By working together through organizations such as ECOWAS or regional security alliances, leaders can coordinate responses to insurgencies, share intelligence, and provide mutual support against extremist groups like the Islamic State. This collective approach reduces the isolation of Burkina Faso and ensures that Traoré's government is not left vulnerable to external destabilization.
- Leaders should encourage inclusive governance and dialogue within Burkina Faso. Traoré's administration can be supported to engage with civil society, traditional leaders, and opposition groups to build trust and reduce internal divisions. This inclusivity will help prevent alienation of communities that might otherwise turn to rebel movements, thereby strengthening the legitimacy of his government.

- West African leaders can assist in strengthening economic resilience. Economic hardship often fuels instability, so regional partners should promote trade, infrastructure development, and investment in Burkina Faso. Supporting reforms that improve education, healthcare, and job creation will reduce grievances that insurgents exploit.
- They should focus on security sector reform and capacity building. Providing training, resources, and modern equipment to Burkina Faso's military and police forces will enhance their ability to counter rebel attacks effectively. At the same time, leaders must encourage professional conduct and respect for human rights to avoid alienating the population.
- West African leaders should promote diplomatic engagement and conflict resolution mechanisms. Organizing conferences and peace dialogues, as mentioned in the scenario, can help de-escalate tensions and prevent the outbreak of wider conflict. By mediating disputes and offering platforms for negotiation, they can reduce the risk of Traoré's government being undermined by internal or external pressures.
- Since Burkina Faso faces threats from extremist groups, leaders can establish joint military operations, intelligence-sharing platforms, and coordinated border patrols. This will help contain insurgencies that often move across porous borders.
- Encouraging national reconciliation programs can help Traoré's government reduce internal tensions. By addressing grievances of marginalized groups and offering pathways for rebels to reintegrate into society, leaders can weaken insurgent recruitment.
- West African leaders should advise Traoré to maintain transparent communication with citizens. Regular updates on reforms, security measures, and progress build trust and reduce the spread of misinformation that rebels or rivals may exploit.
- To reduce dependency on a few external allies, leaders can help Burkina Faso diversify trade and investment partners. This creates resilience against sanctions or economic shocks and ensures sustainable development.
- Since young people are often targeted by extremist groups, leaders should support education, vocational training, and youth employment programs in Burkina Faso. Empowering the youth reduces vulnerability to radicalization and strengthens long-term stability.
- Encouraging Traoré to strengthen judicial independence, anti-corruption measures, and democratic institutions will help legitimize his government. Strong institutions ensure continuity even during crises and reduce reliance on military power alone.
- West African leaders can also help Traoré build international alliances with partners outside the region, such as the UN or African Union, to secure humanitarian aid, development funding, and diplomatic backing against external threats.
- Therefore, regional cooperation, inclusive governance, economic support, security reforms, and diplomatic engagement are key strategies that West African leaders can adopt to safeguard Captain Traoré's government and prevent a decline similar to the downfall experienced by Napoleon Bonaparte.

CONSTRUCT FOUR: GLOBAL POLITICS AND IDEOLOGIES

ITEM 4

In the first half of the twentieth century, large oil deposits were discovered in different parts of the Middle East. Oil was first discovered in Iran (Persia) in 1908, followed by Iraq in 1927, Bahrain in 1932, Saudi Arabia and Kuwait in 1938, and Qatar in 1940. Before these discoveries, many countries in the region had small economies based on fishing, farming, animal keeping, and trade. However, the discovery of oil transformed the Middle East into one of the richest and most strategically important regions in the world. Oil revenues led to infrastructural development, technological advancement, growth of the education sector, urbanization, job creation, and increased Foreign Direct Investment (FDI). Despite these achievements, oil discovery also created several challenges, including environmental degradation, regional conflicts, income inequality, foreign interference, and the rise of authoritarian governments in some countries.

Recently, large oil deposits have been discovered in the Kidaka Region. Since the discovery, there has been excitement among many people who believe that oil will bring wealth, employment opportunities, better roads, improved schools, and rapid economic development, just as it did in some Middle Eastern countries. However, others fear that oil may instead lead to environmental destruction, conflicts among communities over resource ownership, corruption, unequal distribution of wealth, and political instability similar to some of the challenges experienced in the Middle East. Tension is already beginning to emerge among local communities, political leaders, and investors over how the oil resources should be managed. As a result, a national conference has been organized to find ways of ensuring that oil becomes a blessing rather than a curse to the people of Kidaka.

Task:

a) Analyses the negative impacts of oil discovery in the Middle East as shown in the scenario.

Problem statement/challenge

The problem in the scenario is that tension is already growing among local communities, political leaders, and investors over how oil should be managed in the Kidaka Region. People are already afraid that oil may bring the same problems that occurred in the Middle East after oil was discovered.

Introduction

In the Middle East, oil was found in countries like Iran in 1908, Iraq in 1927, and Saudi Arabia in 1938, and later in Kuwait, Bahrain, Qatar, and the UAE. These discoveries transformed the region from a poor area into a very rich one. However, they also brought many problems, such as environmental damage and endless conflicts. The following is an analysis of these problems

Body

- The discovery of oil in the Middle East led to environmental degradation. Large areas of land were cleared to build roads, pipelines, and drilling sites, which destroyed plants and animal homes. For example, in Kuwait, oil fields destroyed desert plants and affected animals like the Arabian gazelle. In Iraq, oil fields disturbed animals like sand cats and reptiles. In Kuwait for example, the expansion of the Burgan Oil Field, one of the largest in the world, caused widespread destruction of native flora like the Arfaj shrub, essential for supporting desert wildlife such as the Arabian gazelle. In southern Iraq, the development of massive oilfields like Rumaila and West Qurna disrupted the natural movement of wildlife, including sand cats, desert foxes, and reptiles that relied on undisturbed terrain for survival. Many people near oil fields became sick with diseases like cancer. Oil refining also used a lot of water in dry countries, causing water shortages for farming and daily use. This turned oil into a curse to many creatures.

- The discovery of oil in the Middle East also brought foreign interference. Powerful countries like Britain, France, and the United States became involved in the region because they wanted oil for their industries, transport, and military machines. These powers took control of oil fields, took most of the profits from such fields, and even overthrew leaders who attempted to nationalize oil. A clear example of foreign major powers' interference as a result of oil discovery in the Middle East was the overthrow of Mohammad Mossadegh as the Prime Minister in Iran in 1953, following his nationalization of the oil industry by taking control of it from the British-owned Anglo-Iranian Oil Company (later BP). His nationalization reduced British control over Iranian oil and threatened Western oil interests. As a result, Britain and the United States strongly opposed his government. In 1953, the CIA from the United States and MI6 from Britain organized a coup known as Operation Ajax, which removed Mossadegh from power and strengthened the authority of the Shah, Mohammad Reza Pahlavi. In Iraq, after oil was discovered at fields like Baba Gurgur, Britain and France gained strong influence over oil production and even controlled how profits were shared. In Saudi Arabia, American companies such as Standard Oil of California (later Chevron) were given rights to explore and control large oil areas, which made the country dependent on foreign technology and companies. Because of this, Middle Eastern powers lost their total independence
- Oil discovery also led to the rise of strong and sometimes harsh governments. Oil money was used to build powerful armies, police, and intelligence systems that stopped opposition and protests. In Saudi Arabia for example, kings like King Abdullah and King Salman used oil money to strengthen security forces and control political opposition, which limited public protests and freedom of speech. In Bahrain, for example, during the 2011 Arab Spring protests under King Hamad bin Isa Al Khalifa, oil-funded security forces were used to stop people who were demanding political change. In Iran, after the 1979 Islamic Revolution, the Ayatollahs, such as Ayatollah Khomeini and later Ayatollah Ali Khamenei, used oil money to strengthen the Revolutionary Guards and security systems that controlled opposition and limited political freedom. In some Gulf countries, governments depended more on oil money than on taxes from citizens, so they did not feel strong pressure to listen to the people. This reduced democracy and freedom of speech.
- The oil industry in the Middle East placed immense pressure on already scarce water resources. Extraction and refining processes required large amounts of water, while pollution from spills and industrial waste contaminated rivers and underground aquifers. In a region that is naturally arid, this worsened water scarcity, making it harder for communities to access clean water for drinking, farming, and daily survival. The prioritization of oil over sustainable water management deepened the crisis.
- The discovery of oil shifted economic focus almost entirely to the petroleum industry, discouraging investment in other productive sectors such as agriculture, manufacturing, and tourism. Governments and investors prioritized oil revenues because they were highly profitable, leaving other industries underdeveloped. This created economies that were overly dependent on oil, making them vulnerable to global price fluctuations and limiting long-term economic stability.
- Oil wealth became a source of competition and rivalry among Middle Eastern countries and communities. Disputes over oil fields, pipelines, and revenue-sharing often escalated into political tensions and armed conflicts. Instead of fostering cooperation, oil resources intensified divisions, fueling mistrust and hostility between neighboring states and within societies. These rivalries undermined regional stability and contributed to prolonged insecurity.
- The oil boom attracted both local and foreign laborers, but many workers faced exploitation. Migrant workers, in particular, were subjected to poor working conditions, low wages, and limited rights. They often lived in overcrowded camps and endured harsh treatment, while governments and companies prioritized profits over labor protections. This created a system where workers contributed to immense wealth but received little recognition, fair compensation, or social protection.

- Oil discovery caused many wars and conflicts in the Middle East. Countries fought for control of oil and influence in the region. In Iraq, for example, the invasion of Kuwait in 1990 happened partly because Iraq wanted control over Kuwait's oil fields and resources. This led to the Gulf War of 1990–1991, where many countries, like the United States and its allies, fought against Iraq. In Yemen, Saudi Arabia and the United Arab Emirates supported the government while Iran supported the Houthis, turning the war into a long and deadly conflict. In Syria, different countries supported different groups because of political and strategic interests linked to the region. These wars caused death, destruction, and suffering for millions of people.
- Oil also caused unfair sharing of wealth and exploitation of workers. Most oil money went to rich leaders, royal families, and foreign companies, while ordinary people and migrant workers remained poor. In Saudi Arabia, for example, although the country earns huge income from oil fields like Ghawar, most of the wealth is controlled by the royal family, while many low-income citizens and foreign workers do not benefit equally. In the United Arab Emirates, especially in cities like Dubai and Abu Dhabi, migrant workers built tall buildings, roads, airports, and oil-related infrastructure, but many of them lived in crowded labour camps far from the city, with low wages and difficult working conditions. In Kuwait, migrant workers in the oil and construction sectors often had fewer rights than citizens and depended fully on their employers for residence permits and jobs under the kafala system. In Oman, foreign workers in oil fields and industrial projects also faced strict job control, making it difficult for them to change employers or report poor treatment. In some Gulf countries, the kafala sponsorship system made workers dependent on employers for visas and legal status, which in some cases led to exploitation, withheld wages, and poor living conditions. This shows that while oil made Middle Eastern countries very rich, the benefits were not shared fairly, and many ordinary workers suffered despite contributing heavily to development.

Conclusion

In conclusion, the discovery of oil in the Middle East brought about environmental destruction, foreign interference, strong and sometimes harsh governments, wars and conflicts, unfair sharing of wealth, and exploitation of workers. These examples show that oil can also be a curse if it is not well managed.

b) Critically evaluate the strategies that can be adopted to prevent the occurrence of such challenges in the Kidaka Region.

Introduction

The discovery of oil in the Middle East gives important lessons to regions and countries that discover oil today. In the Middle East, oil helped many countries to become rich and develop. However, oil also caused many problems, such as environmental destruction, corruption, conflicts over resources, unequal sharing of wealth, foreign interference, and political instability. Therefore, the experience of the Middle East can help the Kidaka Region avoid making the same mistakes after the discovery of oil. These problems can be prevented through the following strategies;

Body

- The government in Kidaka should make strong environmental laws. Such laws should stop the destruction of forests, oil spills, air pollution, and water pollution. Part of the oil money should be used to protect the environment, plant trees, protect wildlife, and manage water. However, even when all these environmental rules are followed, the environment can still be destroyed because oil production involves large-scale drilling, land clearing, and pollution from industries. Therefore, if real environmental protection is to be achieved in Kidaka, the government must closely monitor oil activities and make sure both the government and oil companies fully commit to protecting the environment at every stage.

- The government in Kidaka should make strong rules to fully control its oil resources. All oil agreements with foreign companies should be open and known to the public. Strong national institutions should manage oil money so that outsiders do not control it. Kidaka should also work with many different countries, like China, America, and Europe, so that it does not depend on only one foreign power. However, even when strong laws are made, powerful foreign countries may still try to influence oil-producing areas because oil is very important for their industries, transport, and military power. Therefore, Kidaka must always remain alert, strengthen its national leadership, and protect its independence in all oil dealings.
- Another important strategy is economic diversification. Kidaka should avoid over-reliance on oil by investing in other sectors such as agriculture, manufacturing, tourism, and technology. This will create a balanced economy that can withstand fluctuations in global oil prices and provide sustainable employment opportunities. Diversification also ensures that traditional livelihoods are not abandoned, reducing the risk of economic vulnerability.
- Regional cooperation and strong labor protections are also essential. Kidaka should work with neighboring regions and countries to prevent resource-based rivalries and promote peaceful collaboration. At the same time, laws protecting workers' rights must be enforced to prevent exploitation, especially of migrant laborers. Fair wages, safe working conditions, and social protections will ensure that workers benefit from oil wealth rather than being marginalized.
- Oil money should be managed in a very open and fair way. Parliament, civil society groups, churches, and citizens should all be involved in checking how oil money is used. Strong anti-corruption laws should be enforced, and courts should be independent so that leaders can be controlled. Oil money should be used to build schools, hospitals, roads, and create jobs for all people, not just leaders or powerful groups. People's rights and freedom should be protected at all times. However, even when systems are put in place, some leaders may still try to misuse oil money because it brings a lot of wealth and power. Therefore, Kidaka must have strong public monitoring and strict punishment for corruption to protect democracy and ensure leaders serve the people.
- Oil should be shared fairly among all regions and communities so that no group feels left out. There should be peace talks between government leaders, community leaders, and investors before any conflict starts. Clear laws should be made about land ownership, compensation, and the sharing of oil profits. Good relationships with other countries should also be encouraged to avoid outside influence in local conflicts. However, even when fair systems are introduced, disagreements may still happen because oil is very valuable and people always want control over it. Therefore, Kidaka must always use dialogue, fair laws, and peaceful conflict-solving methods to reduce tension and avoid war.
- Oil money should be shared fairly through national development programs that benefit all citizens. Strong labour laws should protect workers by ensuring fair wages, safe working conditions, and proper treatment. The government should also develop other sectors like farming, fishing, and manufacturing so that people do not depend only on oil for survival. However, even when fair systems are created, inequality may still happen because oil industries often give more benefits to companies and skilled workers than ordinary citizens. Therefore, Kidaka must always improve fairness, protect workers, and ensure that oil benefits reach all people in the country.

Conclusion

Therefore, Kidaka must learn from the Middle East experience by closely monitoring oil activities, protecting its independence in all oil dealings, having strict punishment for corruption to protect democracy, using dialogue, fair laws, and peaceful conflict-solving methods, and improving fairness, protecting workers, and ensuring that oil benefits reach all people in the country.

ITEM 5

Between the 1920s and 1950s, China experienced major political, economic, and social changes. During this period, the Kuomintang (KMT) government under Chiang Kai-shek faced many challenges, including class divisions among people, economic hardships, a poor education system, weak healthcare services, poor governance, and repeated famine. The situation became worse due to the Japanese invasion of China and the long civil war between the KMT and the Chinese Communist Party (CCP). As public confidence in the KMT continued to fall, the CCP under Mao Zedong gained increasing support from peasants, workers, and other disadvantaged groups. These developments eventually led to the collapse of the KMT government in 1949 and the establishment of the People's Republic of China under communist leader Mao Zedong.

The rise of communism under Mao greatly changed China's development path. The new government introduced reforms that transformed China into one of the major powers in the world. These reforms included the abolition of social classes such as traditional landlords, the introduction of state ownership and central planning after 1949, collectivization of agriculture, and the reshaping of China's education system by linking learning closely to national development goals. The government also promoted equal access to medical services and strengthened governance by creating a highly centralized one-party state under the control of the Chinese Communist Party.

Recently, the African state of Kijana Republic has experienced growing political and economic instability. The country has been governed for many years by the Union Party, whose leaders are increasingly being accused of discrimination against people, economic mismanagement, a weak education system that produces mainly job seekers, lack of medical care, weak political leadership, and repeated famine. In response, a new political movement known as the People's Transformation Front has gained popularity among workers, peasants, youth, and other marginalized groups. As support for the opposition movement continues to grow, concerns have emerged that the country could experience serious political instability if people's grievances are not addressed. Consequently, the ruling party has organized a development conference to evaluate lessons that can help Kijana Republic respond effectively to the needs of its citizens and avoid political collapse.

Task:

a) Analyse the factors that led to the collapse of the KMT government as presented in the scenario.

Problem statement/ challenge

The problem in the scenario is the fear that Kijana Republic may face political instability if people's problems are not solved. These include corruption, poor leadership, discrimination, weak education, poor healthcare, economic hardship, and famine under the ruling Union Party. A similar situation happened in China under the Kuomintang (KMT) government

Introduction

The Kuomintang (KMT) government was founded in 1912 by Sun Yat-sen after the fall of the Qing Dynasty. He aimed to build a modern, united China based on nationalism, democracy, and improving people's lives. However, China remained weak and divided by warlords. The KMT briefly worked with the Communist Party, but in 1927, Chiang Kai-shek started a civil war after breaking the alliance. The KMT later faced corruption, economic problems, and the Japanese invasion, and was defeated by the Communists in 1949, leading to its downfall. This shows that governments that fail to solve people's problems may lose support and collapse. The following are the analysed factors that led to the collapse of the KMT government in China.

Body

- The KMT government collapsed partly because of deep social divisions that existed in China. For a long time, Chinese society had unequal social classes, where a small group of people such as landlords, rich businessmen, and government officials lived in wealth and power, while the majority of people such as peasants, workers, and the poor lived in suffering and poverty. Even after the fall of the old imperial system, these class differences continued under the KMT. In rural areas, many peasants did not own land and were forced to rent it from landlords, paying high rents and taxes, which kept them in debt and hunger. In cities, rich officials and military leaders lived comfortable lives in big houses, while ordinary workers struggled to find food and basic needs. Instead of reducing this gap, the KMT government failed to protect the poor or carry out strong land reforms. This made the poor people feel that the government only served the rich and ignored their suffering. As a result, many peasants and workers lost trust in the KMT and supported the Communist Party, which promised equality, land for the poor, and fair treatment for all citizens. Therefore, these strong social divisions weakened unity in China and contributed to the collapse of the KMT government.
- Economic hardships also led to the downfall of the KMT government in China. The government printed too much Chinese yuan to pay soldiers, fund the civil war, and run state activities, which caused very serious inflation. As a result, prices of basic goods such as rice, salt, soap, fuel, transport, and medicine rose very quickly, especially in cities like Shanghai, Nanjing, and Chongqing, where ordinary people could no longer afford daily needs. For example, a worker's salary could not buy enough food for even one day, and people sometimes carried large bundles of money just to buy small items in the market. In rural areas such as Henan, Hebei, and Shandong, peasants suffered heavy taxes and received very little value for their crops, forcing many into debt or poverty. Businesses collapsed because money lost value, and traders stopped trusting the Chinese currency, so they used barter trade or foreign money instead. This economic crisis destroyed public confidence in the KMT government, while the Communists gained support because they kept prices more stable and improved living conditions in the areas they controlled.
- The poor education system also contributed greatly to the collapse of the KMT government. During the period of war and instability in China, many schools were destroyed, closed, or abandoned because fighting was taking place in many parts of the country. In rural areas, especially in provinces like Shandong, Hebei, Henan, and Sichuan, many children could not go to school because there were no teachers, no classrooms, and no learning materials such as books and pens. In some village provinces, like Hebei Province, school buildings were used as military shelters during the civil war, so learning stopped completely. In parts of Shandong Province, many schools closed for long periods because teachers had fled due to fighting and insecurity. In cities like Nanjing and Chongqing, schools also suffered from overcrowding and a lack of government support, as most funds were used for war instead of education. As a result, many children grew up without proper education, which frustrated parents and young people who expected a better future. This neglect made many citizens lose confidence in the KMT government and support the Communist Party, which promised to build more schools and improve education for ordinary people.
- Weak healthcare services also played a major role in the collapse of the KMT government. During this period, many hospitals across China were very poorly equipped and lacked enough medicine, doctors, and nurses. In rural and war-affected areas, especially in provinces like Henan and Shanxi, people suffered greatly because they could not access proper medical care. For example, in Henan Province, many sick people died from cholera and typhoid because there were no nearby hospitals or medicines. In parts of Hebei Province, hospitals were damaged or closed during the civil war, forcing people to travel long distances for treatment, often without success. In big cities like Nanjing, hospitals were overcrowded and lacked medicine because most medical supplies

were sent to support soldiers instead of civilians. This made ordinary people feel abandoned and ignored by the government. Because of this weak healthcare system, many citizens lost trust in the KMT government and began to support the Communists, who provided basic medical care and small clinics in the areas they controlled.

- The KMT government also collapsed because of poor governance and lack of democracy. Although the KMT claimed to support democracy, real power remained in the hands of Chiang Kai-shek and his small group of Guomindang (GMD) clique, around him such as Soong Tse-ven, a powerful finance minister, Kung Hsiang-hsi, an important financial leader, Chen Lifu, senior KMT political party administrator, Chen Cheng, top military commander and Dai Li, head of intelligence (secret police). Opposition groups were controlled, critics were arrested, and many citizens were denied political freedom. Secret police and intelligence agencies were used to silence people suspected of supporting communism. Many intellectuals, students, and ordinary citizens became unhappy with the dictatorship and the lack of political participation. In contrast, the Communist Party promised equality, participation, and local involvement in governance.
- Severe famine also caused the collapse of the KMT government. From 1928, China faced various cases of famine. These included the 1928 and 1930 famine, the 1937–1945 long-term famine, among others. Many parts of China suffered from severe food shortages because of drought, war, and poor farming methods. Affected areas included provinces such as Anhui, Hunan, Gansu, and Jiangsu, among others. In rural villages in Anhui Province, many families ran out of food and depended on wild plants and tree roots to survive. In Hunan Province, failed harvests left entire villages without grain, forcing people to migrate in search of food. In Shaanxi Province, famine became worse in remote villages where farmers had no support or relief from the government. The KMT government failed to respond effectively, and in some cases, food supplies were prioritized for soldiers instead of starving civilians. This made many rural people feel abandoned and increased their anger towards the government. In contrast, in Communist-controlled areas, local leaders organized food sharing and basic relief, which increased their support among the population. Therefore, famine greatly weakened the KMT government because it increased suffering across many regions of China and reduced public trust in its leadership.
- The Japanese invasion of China in 1937 greatly contributed to the downfall of the KMT government. The war was offset by Japan's desire to expand its empire. This war caused massive destruction across China. In major cities like Shanghai, factories, houses, roads, and bridges were destroyed by heavy bombing, leaving many people homeless and unemployed. In Nanjing, when Japanese forces captured the city, there was extreme destruction and mass suffering, and the city became a symbol of the war's brutality. In northern areas like Hebei, many villages were burned or abandoned as fighting between Chinese and Japanese forces made normal life and farming impossible. Because of this, the KMT government had to move its capital from Nanjing to Chongqing, where it continued to face constant Japanese bombing, forcing it to spend most of its money and soldiers on the war instead of governing the country. Meanwhile, in areas like Shaanxi Province, the Communist Party organized resistance, protected rural communities, and helped peasants survive through local support systems. This contrast made many Chinese people see the Communists as more effective and caring, while the KMT appeared weak and overwhelmed, which greatly contributed to its loss of support and eventual collapse in 1949.
- The long civil war between the KMT and the Communist Party also led to the downfall of the KMT government. The civil war began in 1927 when Chiang Kai-shek, the leader of the KMT, turned against the Communist Party after they had earlier worked together in a united front to fight warlords and unite China. Chiang ordered attacks on Communists in cities like Shanghai (1927 White Terror), where thousands of suspected Communists and workers were killed or arrested, and this ended the cooperation between the two groups and started a long conflict. Fighting

continued in different phases, and after World War II ended in 1945, the war restarted fully from 1946 to 1949 as both sides fought to control China. During this final phase, KMT soldiers lacked proper weapons and equipment because of corruption and weak supply systems. For example, during the Liaoshen Campaign (1948) in Manchuria, many KMT units collapsed around cities like Shenyang and Changchun due to lack of enough weapons and encirclement. These defeats were made worse by poor leadership, weak planning, and corruption within the KMT army. In contrast, Communist soldiers were better organized, disciplined, and strongly motivated, receiving political education, local support, and effective leadership from Mao Zedong and his commanders, which helped them win the war and eventually take control of China in 1949.

- Increased support for the Communist Party also partly led to the collapse of the KMT government. The Communist Party gained strong support from peasants, workers, and poor citizens because it promised land reform, equality, lower taxes, and better living conditions. In areas controlled by the Communists, especially in Shaanxi Province, they shared land among peasants and reduced landlord control, which made poor farmers happier and more loyal to them. In parts of Shandong Province (1945–1948), Communist local leaders divided large farms owned by landlords and gave small plots of land to poor families, which increased peasant support. Across many controlled areas, they also provided simple medical help and organized food sharing during difficult times. This made many citizens believe that the Communist Party cared more about their suffering than the KMT government. As a result, more people supported the Communists, which weakened the KMT government and helped lead to its collapse in 1949.
- The strong leadership of Mao Zedong also contributed to the downfall of the KMT government. Mao was able to organize peasants and workers into a strong movement that supported the Communist Party, especially in areas like Shaanxi Province, where he built a strong revolutionary base between 1935 and 1948. He promoted discipline, unity, and political education among his followers. In Communist-controlled villages, soldiers and civilians were taught to work together and support each other during the civil war years (1946–1949). He also introduced land reform policies in places such as Shandong and Hebei provinces in the late 1940s, where poor peasants were given land taken from rich landlords, which greatly increased his popularity among rural communities. In these same regions, local Communist leaders also helped organize farming groups, shared food during shortages, and protected villagers from landlord exploitation, which made people feel more secure compared to KMT-controlled areas. Because of this strong and practical leadership, Mao gained wide support from ordinary people who were suffering, and this made the Communist Party appear as a strong and caring alternative to the KMT government. This strong leadership played a major role in the final victory of the Communists in 1949.

Conclusion

The collapse of the KMT government in China was mainly caused by the Japanese invasion of 1937, the long civil war with the Communist Party, and serious economic failure. Therefore, the Kijana Republic should focus on strong national defence and peaceful diplomacy to avoid foreign invasion and civil war, maintain economic stability by controlling inflation and managing resources properly, and ensure honest leadership with strong institutions to prevent corruption and military collapse.

b) Evaluate lessons from China's communist development path that can help Kijana Republic respond effectively to the needs of its citizens and avoid political collapse.

- Drawing from the above experience, the Kijana Republic can identify strategies that respond to citizens' grievances, reduce inequality, and build a stronger, more resilient state capable of avoiding political collapse as explained below.

- The government should ensure fair sharing of land, jobs, and national resources so that both rural and urban people benefit equally, and poor families are supported to improve their lives. However, even when governments try to reduce inequality, class differences may still remain because some people have more opportunities, education, or influence than others, and corruption can also make the gap worse. Therefore, the Kijana Republic must always promote fairness, fight corruption, and make sure that national wealth benefits all citizens, not only a few powerful and rich people.
- The government should carefully control the printing of money and ensure that inflation does not rise too fast. The government should also make sure that prices of basic goods remain stable so that citizens can afford their daily needs. Strong financial planning and proper management of national resources are very important for economic stability. However, even when governments try to control inflation, prices may still rise because of external problems such as drought, war, fuel shortages, or global economic changes. These factors can reduce production and increase the cost of goods even when money supply is controlled. Therefore, the Kijana Republic must build a strong and stable economy by improving production in agriculture and industry, controlling inflation carefully, and protecting citizens from sudden price increases.
- The government should invest heavily in education by building enough schools in both rural and urban areas, training qualified teachers, and providing enough learning materials such as books, desks, and classrooms. Education should be made a top national priority because it helps children gain knowledge and build the future of the country. The government should also ensure that even poor families can send their children to school without difficulty. However, even when governments try to improve education, problems may still remain because some areas may face insecurity, lack of resources, or poverty. In some rural areas, it may still be difficult to attract teachers, and schools may still lack proper facilities. Therefore, the Kijana Republic must continue to improve education steadily, ensure equal access for all children, and reduce differences between rural and urban schools so that every child gets a fair chance in life.
- The government should improve healthcare by building enough hospitals, especially in rural areas, and training more doctors, nurses, and health workers. The government should also ensure that medicine is available and affordable for all citizens. Health services should be extended to even the smallest villages so that no one is left behind when they are sick. However, even when healthcare systems are improved, challenges may still appear because diseases can spread quickly due to poor hygiene, lack of clean water, natural disasters, or outbreaks of new illnesses that are difficult to control. Therefore, the Kijana Republic must continue strengthening its health system, improve sanitation, and prepare well for disease outbreaks and emergencies.
- Leaders should promote democracy, freedom of speech, and respect for human rights. Citizens should be allowed to take part in politics and decision-making. However, even when democratic systems are introduced, misuse of power may still happen because some leaders may put their own interests first. Therefore, the Kijana Republic must strengthen laws, independent institutions, and accountability to control leaders and protect democracy.
- The government should support agriculture, irrigation, food storage, and emergency relief programs. Farmers should receive seeds, fertilizers, and modern farming skills to increase food production. However, even with improved agricultural support, famine and disease may still occur due to climate change, drought, floods, and population pressure. Therefore, the Kijana Republic must continue strengthening food security and healthcare systems.
- The government should strengthen national security and ensure that the country is well protected from foreign threats. However, even when a country has strong defence systems, it can be attacked by its neighbors, which may cause destruction of infrastructure, loss of lives, displacement of people, and disruption of economic activities. Therefore, the Kijana Republic should strengthen diplomacy and invest in strong but responsible security systems that protect citizens

- The government should take good care of its soldiers by giving them proper training, good salaries, and enough equipment. Soldiers should also be respected and motivated so that they can defend the country well. However, even strong armies can face difficulties if wars continue for a long time or if leadership becomes weak and divided. Therefore, the Kijana Republic must find a peaceful solution to conflicts within its borders to end conflicts.
- The government should listen carefully to the needs of the people and provide fair services such as education, healthcare, land support, and good governance. However, even when governments try to serve people well, some citizens may still support opposition groups if they feel their needs are not fully met. Therefore, the Kijana Republic must ensure fairness, good communication, and strong service delivery to maintain public trust.
- The government should promote strong, honest, and responsible leadership that works for all citizens and not only for a few groups. However, even strong leaders alone cannot succeed if government institutions are weak or corrupt. Therefore, the Kijana Republic must build strong institutions together with good leadership to ensure long-term stability.
- Therefore, the Kijana Republic should focus on strong national defence and peaceful diplomacy to avoid foreign invasion and civil war, maintain economic stability by controlling inflation and managing resources properly, and ensure honest leadership with strong institutions to prevent corruption and military collapse.

ITEM 6

Between 1948 and the late 1970s, the Middle East experienced a series of conflicts between Arabs and Israelis. The conflict originated from competing claims over Palestine, where both Arabs and Jews believed they had historical rights to the same land. In 1947, the United Nations proposed a partition plan that divided Palestine into separate Arab and Jewish states. While Jewish leaders accepted the proposal, Arab leaders rejected it, arguing that it unfairly allocated land and ignored the wishes of the Arab population. The declaration of the state of Israel in 1948 triggered the first Arab-Israeli war, which was followed by other major conflicts such as the 1956 Suez Crisis, the 1967 Six-Day War, and the 1973 Yom Kippur War. These conflicts left far-reaching impacts on the region. These include permanent displacement of Palestinians, massive loss of lives, worsening Arab-Israeli relations, economic damage, and the rise of terrorism in the region. Several attempts were made to achieve peace through signing peace agreements such as the Egypt-Israel Treaty of 1979, the Israel–Jordan Peace Treaty of 1994, the Oslo Accords of 1993–1995, and the Abraham Accords of 2020. However, despite reducing tensions at different times, these agreements have not succeeded in creating permanent peace because important issues such as territorial disputes, refugee resettlement, security concerns, and mutual mistrust remain unresolved.

Recently, the African state of Karume Republic has experienced growing tensions between two major communities, the Luwala and the Tembo. Both groups claim historical ownership of Nabuto Valley, a fertile and resource-rich region. To resolve the dispute, the government proposed a plan to divide the valley into two independent administrative zones. The Luwala accepted the proposal, believing it would promote peace and equitable access to resources. However, the Tembo rejected the plan, insisting that the entire valley belongs to them based on historical occupation. The disagreement has led to violent clashes, destruction of property, displacement of thousands of people, and the emergence of refugee camps in neighbouring countries. Several peace negotiations and mediation efforts organised by regional and international organisations have been held, but they have produced limited results. As violence continues to threaten national stability and regional security, leaders of the Karume Republic have convened a continental peace conference to identify effective strategies that can help establish lasting peace and stability among the communities of Nabuto Valley by avoiding the mistakes that undermined peace efforts in the Arab-Israeli conflict.

Task:

(a) Analyse the impacts of the Arab-Israeli conflicts in the scenario.

Problem statement/ challenge

The problem in the scenario is the growing violent conflict between the Luwala and Tembo communities in the Karume Republic over ownership of Nabuto Valley. This conflict has already led to the destruction of property, loss of lives, and displacement of people into refugee camps in neighbouring countries, creating fear that the situation may worsen if no lasting solution is found. A similar situation happened in the Middle East between Arabs and Israelis.

Introduction

Both Arabs and Israelis claimed ownership of Palestine, leading to long and violent conflicts from 1948 to the late 1970s. These conflicts began after the United Nations proposed the partition of Palestine in 1947, which was accepted by Jewish leaders but rejected by Arab leaders, leading to wars such as the 1948 Arab-Israeli War, the 1956 Suez Canal Crisis, the 1967 Six-Day War, and the 1973 Yom Kippur War. Despite several peace attempts such as the Oslo Accords and the Egypt–Israel Peace Treaty, lasting peace has not been achieved. The following is an analysis of the impacts of the Arab–Israeli conflict as put in the scenario

Body

- The Arab–Israeli conflict led to the permanent displacement of many people, especially Palestinians. This displacement began mainly during the 1948 Arab–Israeli War, when about 700,000 to 800,000 Palestinians were forced to leave or were expelled from their homes in places such as Jaffa, Haifa, Acre, West Jerusalem, Galilee, and coastal Palestine. Palestinians call this event the Nakba, meaning catastrophe. During and after the war, more than 400 villages, including Deir Yassin, Lifta, and Al-Tantura, were destroyed or abandoned. Many of these refugees fled to neighbouring countries such as Jordan, Lebanon, Syria, Egypt, and the Gaza Strip. There, they lived in crowded refugee camps like Jabalia in Gaza and Shatila in Lebanon. By the late 1970s, millions of Palestinians were living without permanent homes, jobs, or citizenship rights. This created suffering, anger, and hopelessness. As a result, the refugee issue became one of the main causes of the long-lasting conflict.
- There was a massive loss of lives in the region. During repeated wars such as the 1948 war, the 1956 Suez Crisis, the 1967 Six-Day War, and the 1973 Yom Kippur War, thousands of soldiers and civilians were killed. Cities and villages became battlefields, and families lived in constant fear of attacks, bombings, and military occupation. This high loss of life created deep hatred and revenge attitudes on both sides, making peace efforts more difficult to achieve. In the Karume Republic, similar violence between Luwala and Tembo has already led to deaths and insecurity. From failed peace processes like Camp David and Oslo, it is clear that peace cannot last when violence continues on the ground.
- The Arab–Israeli conflicts greatly worsened relations between Arabs and Israelis. Both sides developed deep hatred, fear, and mistrust toward each other after many years of war, violence, and destruction. During the Six-Day War of 1967, for example, Israel captured Arab territories such as the West Bank, Gaza Strip, Sinai Peninsula, and Golan Heights, which increased Arab anger because they believed Israel had taken their land illegally. At the same time, Israelis believed they needed these territories for protection and security. After the Oslo Accords of the 1990s, mistrust continued because both sides accused each other of breaking promises. Palestinians accused Israel of continuing to build Jewish settlements in the West Bank and East Jerusalem, while Israelis accused Palestinian groups of supporting violence and attacks. Because of this deep mistrust and continuous violence, peace in the Middle East remained weak, unstable, and temporary instead of becoming permanent and lasting.
- There was serious economic destruction in the Middle East. During wars such as the Six-Day War of 1967 and the Yom Kippur War of 1973, many roads, bridges, airports, factories, schools, farms, and trade routes were destroyed, making transport and trade very difficult. Countries spent huge amounts of money buying weapons, training soldiers, and carrying out military operations instead

of using the money to improve education, healthcare, agriculture, industries, and other development projects. For example, Egypt and Syria spent large amounts of money rebuilding their armies after losing wars against Israel, while Israel also increased military spending because it feared attacks from neighboring Arab countries. Trade between Arab countries and Israel was also affected. After all, many borders were closed during conflicts. Tourism, which could have brought income to countries like Israel, Egypt, Jordan, and Lebanon, also declined during periods of violence because many visitors feared insecurity. Poverty became widespread as normal economic activities such as farming, trade, fishing, and transport were disrupted by continuous violence. As a result, the Arab–Israeli conflicts slowed economic growth and development across much of the Middle East for many years.

- The Arab–Israeli conflict contributed greatly to the rise of terrorism. Many Palestinians believed that peaceful negotiations were failing to solve their problems, such as the loss of land, refugee suffering, and Israeli occupation of Palestinian territories. As a result, some groups decided to use violence and armed struggle to fight for political goals and independence. For example, the Palestine Liberation Organization (PLO) was formed to fight for Palestinian rights and liberation, and some of its groups carried out attacks against Israeli targets both inside and outside the Middle East. Later, more radical groups such as Hamas and Islamic Jihad also emerged and used methods like suicide bombings, rocket attacks, kidnappings, and armed resistance against Israel. These violent actions increased fear and insecurity in Israel because many civilians were killed or injured in attacks on buses, markets, schools, and public places. In response, Israel carried out military operations, air strikes, arrests, and invasions in Palestinian areas such as Gaza and the West Bank. For example, during the Second Intifada from 2000 to 2005, there were many suicide bombings by Palestinian militants and strong military retaliation by Israel, leading to the deaths of thousands of people from both sides. This created a continuous cycle of violence where each side attacked the other in revenge.
    - **However,** led to the creation and strengthening of the Arab League. The Arab–Israeli conflicts made the Arab League more active, more united, and more important in regional politics. The Arab League, formed in 1945, was originally created to promote cooperation among Arab countries, but the wars with Israel pushed it to take a stronger role in defending Arab interests and trying to coordinate responses to major regional problems. After the 1948 war and especially after the defeat of Arab states in the 1967 Six-Day War, the Arab League became a central platform where Arab leaders met to discuss collective action against Israel. For example, at the Khartoum Summit of 1967, Arab leaders agreed on the famous "Three No's": no peace with Israel, no recognition of Israel, and no negotiations with Israel at that time. This showed a strong united position among Arab countries, even if it was later softened in future years. The conflicts therefore helped to strengthen cooperation among Arab states, because they needed to present a common position in diplomacy, military planning, and political decision-making.
- The Arab–Israeli wars also helped to strengthen Israel as a state. The 1948 Arab–Israeli War was very important because it marked the creation and survival of the state of Israel, giving it international recognition and a strong sense of independence. Many Jewish immigrants and Holocaust survivors who arrived in Israel saw the survival of the new state as proof that they had a safe homeland where they could rebuild their lives. Each later war, especially the 1967 Six-Day War, further strengthened Israel's belief in its ability to defend itself against larger Arab armies. During that war, Israel quickly defeated several Arab states and gained control of territories such as the West Bank, Gaza Strip, Sinai Peninsula, and Golan Heights, which increased national pride and confidence among Israelis. Even though these wars created tension, they also helped build strong national unity inside Israel, as citizens worked together to support the army, economy, and state institutions. The constant pressure of war encouraged Israel to develop strong leadership structures, a disciplined society, and a determination to survive, which became key features of its national identity.

- The Arab–Israeli conflicts also led to the rapid development and improvement of military capabilities in both Israel and Arab states. Because each war showed weaknesses in planning, training, and equipment, countries in the region were forced to improve their armies. Israel developed a highly organized and efficient military system known as the Israel Defence Forces (IDF), which became known for strong intelligence, fast mobilization, and advanced military planning. Israel also invested heavily in modern weapons, air power, and defence systems such as iron dome to protect itself from attacks. On the Arab side, countries such as Egypt, Syria, and Jordan learned from their defeats in 1948 and 1967 and began to modernize their armies through better training, foreign military support, and new technology from countries like the Soviet Union. These repeated wars, therefore led to continuous improvement in military training, technology, and strategy on both sides.

Conclusion,

The Arab–Israeli conflicts, to a larger extent, left negative impacts such as the permanent displacement, loss of lives, and economic damage, although it contributed to the growth of Arab and Israel nationalism.

(b) Evaluate strategies that can be adopted from the failure of peace processes between the two states to achieve lasting peace and stability in the Karume Republic.

Introduction

From 1978, several peace agreements were signed between Arabs and Israelis, including the Camp David Accords 1978, the Egypt–Israel Peace Treaty 1979, the Israel–Jordan Peace Treaty 1994, the Oslo Accords 1993 and 1995, and the Abraham Accords 2020. These agreements aimed to reduce conflict and bring lasting peace in the Middle East. However, although they reduced some tensions and improved relations between certain countries, they failed to achieve permanent peace because key issues such as territorial disputes, the Palestinian question, and refugee problems were not fully resolved. This situation provides important lessons for the Karume Republic on how to manage conflict and build lasting peace. The following is an evaluation of strategies that can be adopted from failed peace processes of Israel and its Arab neighbours to achieve lasting peace and stability in the Karume Republic.

Body

- Karume Republic should adopt inclusive dialogue and negotiations involving all affected groups. The Arab-Israeli peace processes excluded some important groups from negotiations. For example, the 1979 Egypt-Israel Peace Treaty mainly focused on peace between Egypt and Israel but did not fully involve Palestinians or address their demands for self-determination and statehood. This even led to the assassination of Egyptian president Anwar Sadat on 6 October 1981 during a military parade in Cairo by Islamist extremists who opposed the Egypt–Israel Peace Treaty. Therefore, in the Karume Republic, both the Luwala and Tembo communities must participate equally in all peace discussions. No community should feel ignored or forced into accepting decisions. Inclusive dialogue allows all sides to express their fears, needs, and expectations openly. It also helps reduce suspicion and hostility. Leaders should avoid secret negotiations or agreements that benefit only political elites because such arrangements can create anger among ordinary citizens. When all affected groups participate fully, they are more likely to support and protect peace agreements. Therefore, inclusive negotiations are necessary for achieving lasting peace and stability in the Karume Republic.

- The peace talks in Karume should ensure fairness in land distribution and resource sharing. The peace efforts in the Arab-Israeli conflict failed was because important territorial disputes remained unresolved. For example, the 1947 United Nations Partition Plan was rejected by Arab leaders because they believed it unfairly gave more land to the Jewish state despite Arabs being the majority population in Palestine at that time. Besides, the Oslo Accords of 1993 and 1995 did not clearly settle issues concerning Israeli settlements, final borders, control of Jerusalem, and Palestinian territories. As a result, disagreements over land continued, and violence later returned. In the Karume Republic, the government must avoid unfair land arrangements that favour either the Luwala or Tembo communities. If one group feels cheated or marginalized, conflict may continue for many years, just as it happened in the Middle East. Fair sharing of resources and land is therefore necessary for preventing future violence and building sustainable peace.
- The Karume Republic should also strengthen reconciliation programs among the communities. The Arab-Israeli peace agreements focused mainly on political arrangements while failing to remove hatred, fear, and mistrust between ordinary people. For example, even after the signing of the Oslo Accords, many Israelis and Palestinians still distrusted each other deeply. Extremist groups on both sides continued spreading hostility and carrying out violent attacks, which weakened the agreements. In the Karume Republic, schools, churches, mosques, community centers, and media organizations should teach peace, tolerance, forgiveness, and respect for diversity. Religious and traditional leaders should encourage reconciliation because communities trust them greatly. If hatred and revenge are ignored, communities may continue fighting even after agreements are signed. Therefore, reconciliation and peace education are essential for creating long-term peace and unity in the Karume Republic.
- There's a need to establish strong security arrangements that protect all communities equally. Several Arab-Israeli peace agreements failed to guarantee security and mutual trust between the parties. For example, after the Oslo Accords, suicide bombings and violent clashes continued because the agreements lacked effective mechanisms to stop extremist violence completely. In the Karume Republic, both the Luwala and Tembo communities must be protected fairly by professional and neutral security forces. The government should ensure that police and military officers do not favour one community over another. Illegal weapons should be collected peacefully, and armed militias should be disbanded to prevent future violence. Regional peacekeepers may also help monitor ceasefires and protect civilians during difficult periods. People who organize violence or spread hate speech should face legal punishment quickly. Refugees and displaced persons should also receive protection and humanitarian support. Without proper security arrangements, communities will continue living in fear and mistrust. Therefore, equal security measures are necessary to build confidence and lasting peace in the Karume Republic.
- There must be neutral mediation, because one weakness of the Arab–Israeli peace process was the perception that mediators were biased. For example, in many negotiations, such as Oslo, some Arab groups believed that the United States favoured Israel, which reduced trust in the peace process. When one side feels that mediators are not fair, they reject agreements or fail to implement them properly. In the Karume Republic, mediators from the African Union or the United Nations must remain neutral when handling the Luwala–Tembo conflict. They should not support one community politically or economically. Instead, they should listen equally to both sides and ensure fairness in negotiations. Neutral mediation increases trust and encourages compromise. If bias is suspected, peace talks may collapse, just as trust issues weakened Middle East agreements. Therefore, fairness in mediation is very important.

- Lasting peace requires solving root causes of conflict rather than simply stopping violence temporarily. Agreements such as Camp David, the Egypt–Israel Treaty, and the Abraham Accords succeeded in reducing direct military confrontation between certain states, but they failed to create complete regional peace because core problems such as territorial disputes, refugees, settlements, borders, and competing historical claims remained unresolved. Temporary ceasefires and diplomatic relations alone were not enough to remove long-standing grievances and emotional hostility. This teaches the Karume Republic that leaders must address the root causes of the Nabuto Valley conflict, including land-ownership disputes, historical grievances, resource-sharing disputes, displacement, insecurity, and political exclusion. If these issues are ignored or postponed, violence may return even after peace agreements are signed. Therefore, lasting peace requires honest solutions to the deeper causes of conflict instead of temporary political arrangements.
- All leaders should give peace talks an opportunity instead of using violence, hatred, or extremist politics during peace processes. In the Arab–Israeli conflict, extremist groups on both sides opposed negotiations and carried out violent attacks that weakened agreements such as the Oslo Accords. Some Israeli hardliners, such as Yigal Amir, opposed the Oslo peace process and assassinated Prime Minister Yitzhak Rabin in 1995 because they believed the agreement gave too many concessions to Palestinians. Even Palestinian hardliners such as Hamas and the Islamic Jihad Movement strongly rejected the Oslo peace process. They rejected compromise completely and believed violence was the only solution. This increased fear, destroyed trust, and reduced public support for peace efforts. The lesson for the Karume Republic is that leaders must strongly discourage hate speech, tribal propaganda, revenge attacks, and political extremism. Security forces should prevent armed groups from disrupting negotiations. If extremist groups are allowed to spread hatred freely, peace agreements may fail because violence will continue undermining reconciliation efforts.

Conclusion

- Therefore, for the Karume Republic to achieve lasting peace between the Luwala and Tembo communities it should ensure inclusive dialogue that involves all affected groups, promote fair sharing of land and resources, ensure neutral and trusted mediation, and focus on solving the root causes of the Nabuto Valley conflict, such as land ownership. However, even with these strategies, peace will only succeed if there is continuous commitment, honesty, mutual trust, and genuine cooperation from both sides to avoid returning to violence.
