Item 1

Code	Basic	Key Points	Description	Weight	Max.W
A	AIM	Science investigation to determine the radius of curvature of a concave mirror in order to replace the shaving mirror that was broken An experiment to investigate the focal length of a shaving mirror so as to replace the broken	Statement of correct aim and purpose	2	02
			Either correct aim or correct purpose	1	
			No aim or purpose (both wrong)	0	
VAR	Variable	Independent valuable object distance, u Dependent variable image distance ,v Constant / control variable • Nature of mirror • Amount of light	All variable statements	03	03
			Any two	02	
			Only one None given	01 0	
H	Hypothesis	The radius of curvature of the mirror lies in the range of 16.0cm to 24.0cm The focal length of the mirror is in the range of 8.0cm to 12.0cm	Values range stated	01	01
P	Procedure	List of apparatus • Source of light, concave mirror • Object (screen with gauge) • White screen 	Major key points • Relevant diagram • Coherent procedure 9-13 key points including relevant diagram and coherent procedure	04	04
			4-8, or 9-13 without relevant diagram and coherent procedures	03	
			1-3 key points	02	
		Procedure a) The electrical circuit for lighting bulb, the wire gauze, the concave mirror and the white screen were set up as shown above b) The concave mirror was adjusted to a distance u = 15.0cm from the wire gauze c) the position of the white screen was adjusted until a sharply focused image I of	Wrong or no correct key points	0	

© WAKISSHA Joint Mock Examinations 2026

		the object appears d) The image distance V was measured and recorded using a metre rule e) Procedures (b) to (d) were repeated for values of u = 20.0cm, 25.0cm, 30.0cm, 35.0cm, and 40.0cm f) The results were tabulated including values of UV and (U + V) or $\frac{u}{v}$ or $\frac{v}{u}$ or $\frac{1}{v}$ and $\frac{1}{u}$ g) The graph of UV or against(U+V) was plotted or $\frac{u}{v}$ against U $\frac{v}{u}$ against V $\frac{1}{v}$ against $\frac{1}{u}$ h) The focal length, f of the graph was obtained from f = s or $f = \frac{1}{s}$ i) The radius of curvature of the mirror is obtained from r 2f			
	Error and precaution	1. Parallax error in reading the scale on a meter rule. Precaution: the eyes should be positioned perpendicularly in reading the meter rule scale 2. Drained dry cells Precaution: use fresh dry cells 3. Poor arrangement of apparatus during the experiment Precaution: correct arrangement of apparatus. 4. Light intensity (too much light in the room) Precaution: closing windows / doors with curtains or blankets	Two stated errors with their corresponding precaution	2	2
			1 stated error with their corresponding precaution	1	
			Stated errors only or precaution only Both errors and precautions wrongly stated	0	
DP	Data presentation	• Enclosed column tables • At least 5sets IV and DV • Expected rent for DV (coherent) • At least two correct units	• Enclosed column tables • At least 5sets IV and DV • At least two correct units	04	04

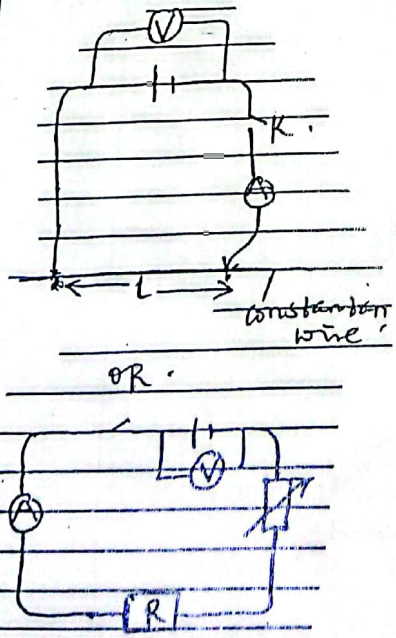

CamScanner

		IV – independent variable DV – dependent variable	• 3 – 4 sets of IV and DV • Expected treats for DV (coherent) • At least one correct unit	02	
			• 1 – 2 sets of IV and DV • Expected treats NB – V – values should be 11 – 30 not beyond	01	
RDA	Record of data accuracy	Experiment • Experimental values of DV • Appropriate accuracy of instrument for DV • For correct calculated (S.fs and dps)	At least 3 Experimental values of DV Appropriate accuracy of instrument for DV For correct calculated (S.Fs and dps)	04	04
			1 – 2 correct Experimental values of DV Appropriate accuracy of instrument for DV	03	
			Incorrect experimental values of DV inappropriate accuracy of instrument for DV	0	
DA	Data analysis	• Title without units • Drawing axes without arrows • Labeling axesses with incorrect units • Uniform scales on both axes • 5 incorrect plotted points	• At least 5 key points including 3 correctly plotted points	05	05
			• 2 key points including 2 correct plotted points	03	
			• 1 key point and including correctly plotted points	01	
DI	Data interpretation	• Correct reading substitutions of all the 4 values in the method of slope • Correct arithmetic • Correct relation of F and S • Correct value of r(cm)	• All the 5 points • Any three points	03 02	03
	Conclusion and advice	• Correct reading values from the graph • Correct units of R and f(cm)	Conclusion and advise moved together	02	02
				TOTAL	30

Item 2

Basis	Basis of Evaluation	Description	Weight
A	**Aim:** An experiment to determine the internal resistance of a dry cell provided, to verify if it can be used in the doll	• Statement of correct aim and purpose • Either Statement of correct aim or correct purpose • No aim or correct purpose or both wrong	2 1 0
Var.	Variables; • Independent; length of the bare wire or correct (I) or voltage (V) or resistance (R) • Dependent; Current (i) or voltage (V) both when given length (I)or resistance (R) • Control; Temperature of wire Thickness of above wires Nature of the bare wire Emf of the day cell	All the 3 key points (Iv,Dv,Cv) Any 2 key points Any 1 key point No key points	3 2 1 0
H	Hypothesis; The internal resistance of the dry cell provided lies in the range 0.5Ω to 1.0Ω	• Correct hypothesis with range • Wrong hypothesis no range	1 0
P	Procedure; List of relevant apparatus; • Conductors (wires, cell holder) • Electronic source • Metre rule • Metres • (Ammeter or voltmeter) • Load (Rheostat, resistor, bare wire) Working diagram;  	• Coherence and relevant diagram • 7 and abort key points • Any 4 – 6 key points • Any 1 - 3 key points • Wrong or no correct kg point	4 3 1 0

CamScanner

	Relevant procedure; R) The circuit was arranged as shown above b) Starting with length I = 0.200m, the switch k was closed. c) The ammeter reading (I) and voltmeter reading (V) were read and recorded. d) Procedure (b) and (c) were repeated for values of l = 0.300, 0.400, 0.500, 0.600, and 0.700m e) The result were recorded in a suitable table. f) A graph of v against I was plotted. g) The slope S, of the graph was obtained h) The internal resistance of the dry cell (r) was then calculated from r = s		
EP	Errors with precaution; Possible sources of errors / Precaution • Loose of concentration / Tightening the connection • Parallax errors in reading ammeter and voltmeter. / Taking readings perpendicularly to the pointer • Drained dry cells / Opening and closing the switch after taking readings • Zero Error / Adjusting pointer to zero.	• Any 2 correct pairs • Any 1 correct pairs • No correct pairs	2 1 0
DP	Data presentation; L(m): 0.200, 0.300, 0.400, 0.500, 0.600, 0.700 I(A): ↓ decreasing V(v): ↑ increasing	• Design of a column table. • 5 sets of data organized (Iv and DV) corresponding • Expected trend for all DVs • At least 2 correct hints	4
	OR R(Ω): 2.0, 3.0, 4.0, 5.0, 6.0 I(A): decreasing V(v): Increasing	• 3 – 4 sets of data organized (Iv and DV) corresponding • Expected trend for all DVs • Any 1 correct hints	2

CamScanner

	OR I(A) decreasing / V(v) Increasing	• 1 – 2 sets of data organized 2 (Iv and DV) corresponding. • No sets of data	1 0
RDA	Recording of data with accuracy;	• At least 3 pairs of correct experimental values • Appropriate accuracy of the instruments e.g. 2 dps for I and last digit even; 1dp or 2dps for v and last dig any (odd or even). • Correctly manipulated variable if any (E-V). (Sfs or dps).	4
		• Correct experimental values • Appropriate accuracy of the instrument	3
		• No experimental value and no accuracy	0
DA	Data analysis; • Title without units • Drawing of both axes • Labeling of both axes with correct units • Uniform scale on both axes. • At least 3 correct plots • Line of best fit	• Any 5key points including at least 3 correct plots	5
		• Any 2key points including at least 2 correct plots.	3
		• Any 1 key points including 1 correct plots	1
		• No key point	0
DI	Data interpretation; • Substitution of all 4 values correctly read from the graph in method of finding slope • Correct arithmetic • Correct relation of rands e.g. r = -s. • Correct value of r • Correct unit of r (Ω or VA^{-1})	• Any 5 key points	3
		• Any 3 key points	2
		• No key points	0
CAD	Conclusion and advice; • Substitutions of all 4 values in method if finding slope • Correct arithmetic • Use of obtained value of r to conclude and advice	• Conclusion and advice • No conclude and advice	2 0
	TOTAL		**30**
