Paper 1

2 hours 45 minutes

Instructions to candidates

- *This paper consists of **two** sections; **A** and **B**. It has **six** examination items.*
- *Section **A** has **two** compulsory items.*
- *Section **B** has **two** parts; **I** and **II**. Answer **one** item from each part.*
- *Answer **four** examination items in all.*
- *You may use diagrams where applicable to illustrate your answers.*
- *Any additional item(s) answered will not be scored.*
- *All answers must be written in the answer booklet(s) provided.*

CamScanner

SECTION A

Respond to both items in this Section

ITEM 1: ***Map Skills***

For this item, use East Africa 1: 50,000 (UGANDA) KOC, map extract sheet 22/3 series Y732 Edition 1-U.S.D to respond to the tasks.

Your class organized a study tour to KOC to study physical and human features and the influence of human activities on climate and vegetation. During your tour, you stayed at KOC Trading Center at the Dry weather road junction Grid Reference 081882 before visiting woodland at Grid reference 026865.

You interviewed the local people you met on the way as a sample, to find out its future prospects. You discovered that the government is planning to establish a variety of livestock farms and factories to process farm products.

Accordingly, the government has set up a team to construct more roads for easy accessibility and to construct a housing estate to act as labour camps for the proposed farm and factory workers. The local population is excited about these developments.

During a consultative meeting with the government officials in which you participated, some leaders expressed fear saying these developments might negatively affect the climate of the area which annoyed the community members.

Task:

(a) (i) Determine the bearing and direction of the woodland from where you stayed.
(ii) Draw a relief section to show features you and your classmates studied as you were interviewing the local people from the woodland.

(b) Giving evidence from the map extract, explain the challenges faced by the people living in the area shown on the map.

ITEM 2: ***Photographic Skills***

For this Item, use the photograph and the information in the text to respond.

East African countries for long have been able to meet the food requirements of their people. Of late, the Semi-desert conditions are expanding due to increased human activities like crop cultivation, industrialization, mining and others. The governments in different East African countries are worried because such dry conditions limit food production.

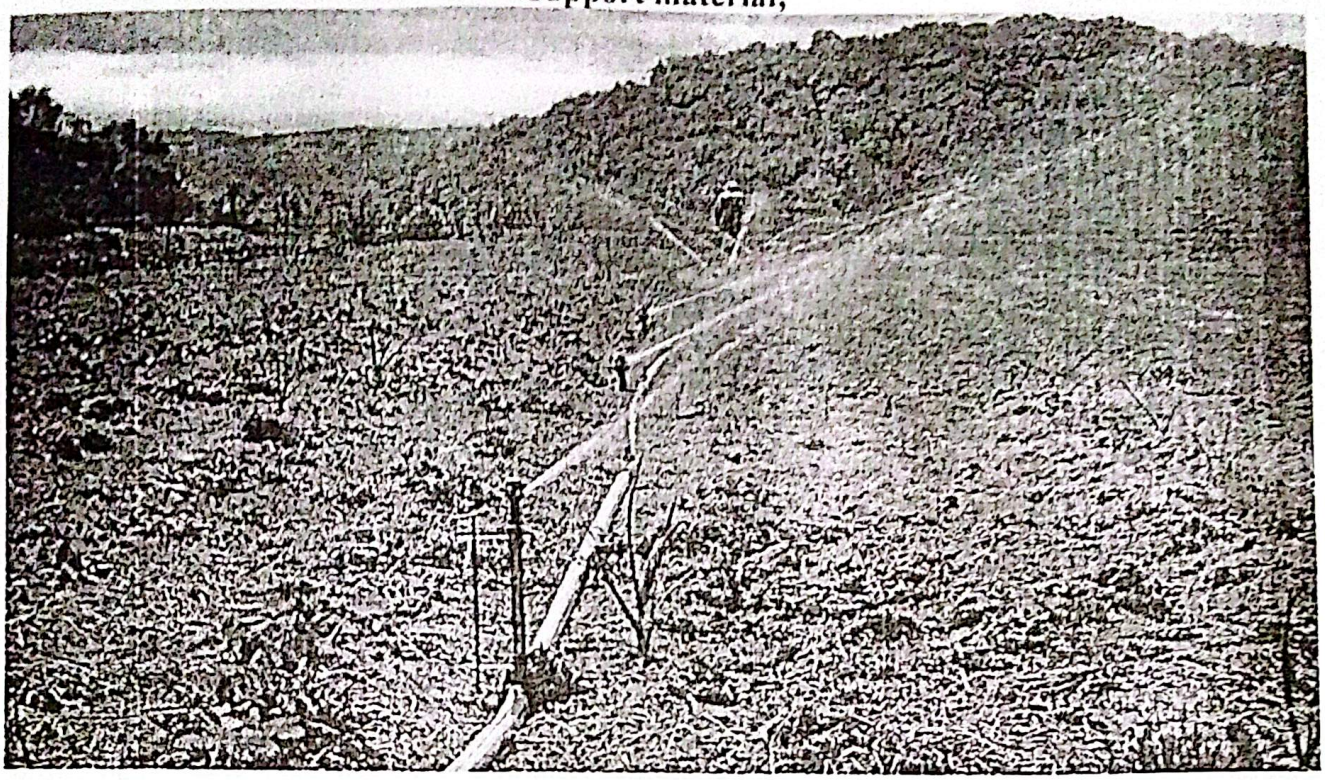

Authorities have therefore encouraged people to engage in irrigation farming as seen in the photograph to ensure continued food supply and improve household incomes. Extensive and small-scale irrigation farms have been established in many parts of East Africa amidst challenges like limited surface water, limited capital, inadequate land and others.
The development schemes often involve large-scale infrastructure like dams and canals to deliver water to farmland. In Uganda, for example, there are multiple irrigation schemes focused on wetland systems.

The local community in the area provided in the photograph have realized that irrigation farming is increasingly becoming important due to its contribution towards development. They have therefore started up a campaign to reach out to different areas and sensitize

CamScanner

masses on irrigation farming, and you have been contacted to be one of the key speakers. However, traces of environment destruction are seen in such areas.

Support material;

Task:

(a) Present the layout of the photograph and describe the technique of crop growing used in the area shown in the photograph.

(b) With evidence from the photograph provided, describe the conditions one should consider before employing the technique in the dry areas.

SECTION B
PART 1
Respond to only one item from this part

ITEM 3

The geography club in your school participated in a fieldwork study trip to western Uganda. During the trip, you visited the relief feature which was long, narrow, steep sided valley with in facing fault scarps and flat valley floor which you noted that it had attracted dense settlement. The local leaders also briefed you that the population around the relief feature keeps on increasing like in any other area in East Africa amidst the so many challenges like floods, landslides and others.

A research carried out by the university student in this area also revealed that the people in this part of East Africa were experiencing a number of problems. To this researcher, so many questions remained unanswered on how this beautiful landscape that was associated with numerous problems yet attracts dense settlement came into existence. The researcher has reached your school and your teacher has requested you to respond to the concern being talked about.

CamScanner

Task:
(a) Describe the formation of the Relief feature identified in the scenario.
(b) How has the relief feature in (a) above helped to make people's lives better?

ITEM 4
In a meeting held by the local people in the community you belong, an official from Uganda Wildlife Authority explained the beauties Uganda exhibit due to her Fauna, Flora and landscape. He emphasized that developing domestic tourism was the way to go if the country was to move to middle income. He further encouraged members to visit different areas to look at the varying relief. Here, Mubende was identified and chosen as the best destination to be visited.
The local people were interested and excited to see landforms found in this area formed by Physical weathering process. The chairperson of the meeting selected you to be the team leader to guide the local people on how those features came into existence.

Task.
a) Identify and explain how the landforms in the said area were formed.
b) Explain the ways how the landforms above influence the way of life of the people in the area.

PART II

Respond to any one Item from this part

ITEM 5
East Africa like any other region within Africa has been experiencing a rapid growth in its population. This growth has been brought about by a number of reasons and it has also come with advantages and disadvantages. Among the many is urbanization. The rate of urban growth in the region is increasing at a very fast rate. The challenge is that these urban centers have not received necessary planning they deserve to handle the increasing population. Accessibility to many places within the urban centers and access to clean water are among the many challenges.
Urban authorities predict that, if nothing is done to curb the situation, urban dwellers may face serious challenges and find life miserable.

A study carried out about population growth in the three major cities of East Africa produced the following results

Urban centers	Population (millions)		
	1980	2000	2020
Nairobi	0.862	2.214	4.390
Kampala	0.855	2.272	5.382
Dar es salaam	0.459	1.233	1.681

The member countries through their population bureaus have gathered in Arusha-Tanzania to specifically discuss population trends in urban areas and you have been invited as one of the presenters.

CamScanner

Task

a) (i) Calculate the percentage change of the population of Dar es salaam between 1980 and 2020.

(ii) Present the data given in the table on a suitable statistical diagram.

b) Suggest possible measures that should be under taken by the urban authorities to minimize the challenges that are resulting from a rapid population concentration.

ITEM 6

Uganda's economy is growing rapidly, but inefficient transport networks are hindering progress. Many rural areas lack well-connected roads, making it difficult for farmers to transport their produce to markets. Rail transport is out dated, forcing them to rely on expensive road freight.

Also, major towns experience severe traffic congestion leading to delays in business operations and increased fuel costs. Uganda has fewer paved road compared to Kenya and Rwanda, making road transport less efficient in some areas. Its rail network is smaller than Kenya and Tanzania and it also has fewer airports, limiting air transport accessibility.

The government through the Minister of Transport and Communication, has embarked on efforts to come up with a plan to encourage national inter-transport development to enhance roads, railways, waterways and public transport, but challenges such as limited funds and land acquisition disputes slow progress.

Therefore, a team of experts to which you are a member, has been tasked to carry out research about the strategies that could be used to develop an efficient and reliable inter-transport network in the country.

Table showing Transport Network Development across East Africa

TRANSPORT NETWORK	UGANDA	KENYA	TANZANIA
Road network	146,000 km	177,800 km	86,472 km
Rail network	1,244 km	3,800 km	4,567 km
Waterways	907 km	1,600 km	3,900 km

Source: UBOS. National Service Delivery Survey 2021 Report. Kampala Uganda; UBOS.

Task:

a) Identify the country with the longest railway network and use a suitable diagram to represent the statistics of her transport network shown in the table.

b) Prepare a document of your findings that you will present to the Minister.
