GEOGRAPHY DEPARTMENT

END OF TERM I 2026 ASSESSMENT

S.4 GEOGRAPHY PAPER 1

TIME: 2¾ HOURS

INSTRUCTIONS TO CANDIDATES

- *This paper consists of **two** sections **A** and **B**. It has six examination items*
- *Section **A** has **two** compulsory items.*
- *Section **B** has two parts; I & II. Answer one item from each part*
- *Respond to **four** items in **all***
- *You may use diagrams where applicable to illustrate your answers.*
- *Any additional item(s) answered **will not** be scored.*
- ***All** answers must be written on the answer sheets provided.*

SECTION A

MAP SKILLS & PHOTOGRAPHIC SKILLS

Item 1: Map skills

For this item use the EAST AFRICA 1: 50, 000 (**UGANDA**): **NAKASONGOLA** Map extract sheet 50/2 series Y732 Edition 1- USD to respond to the tasks.

Nalkasongola has a high potential for development in case its resources are fully exploited. Most of its hills contain valuable minerals. The climate is conducive for a number of activities. Vegetation, land, drainage and other resources are heavily exploited by the recently increasing number of people in the area. However, things are not always good because of inaccessibility of some parts of the area. Many are forced to sell their products at a give away prices thus obtaining little money which limits improvement of their lives.

Task

a) With the use of a suitable illustration, show how relief has influenced human practices, vegetation and the drainage between **Kakondi hill** (**361450**) and **Wakembo** (**440510**)
b) Using evidence from the map, explain how resources identified on the map can be used to improve the lives of the community members.

Item 2. Photograph skills

Over the years, communities in the area on the photograph have relied on its natural resources for livelihoods, food, and trade. However, unsustainable practices have led to a sharp decline in the productivity of these resources, threatening both the ecosystem and the community's survival.

Officials from the Ministry of Agriculture, Animal Industry, and Fisheries (MAAIF) conducted a survey and found disturbing trends. The report they published for example indicated that over 60% of fish caught and landed in the area are immature.

They fear these practices pose a great danger to the future not only of the fisheries resources but also destroy breeding grounds and harm other aquatic life

Following these concepts, officials from MAAIF organised a community meeting in which you were invited to discuss and sensitize the communities on sustainable conservation practices.

Task

a) Use a suitable diagram to illustrate the major physical and man-made features.
b) Suggest to the community members measures that should be taken to ensure sustainable utilization of the resources in the area

SECTION B

This section has **two** parts **I** & **II**

Part I

Choose **one** item from this part

Item 3.

Adriko has been living in Western Uganda area of Ntoroko, Bulisa, Kasese for several years. The area has steep sides with an elongated depression with flat floor. During the wet season, floods tend to displace them but later come back in the dry season where they experience hot conditions. However, this has not stopped her from enjoying this part of East Africa. She has a lot of stories about this landform, Adriko fails to explain its origin to the new members of her community. The community leaders who are not different from him have organised a sensitization meeting where you are expected to attend.

Task

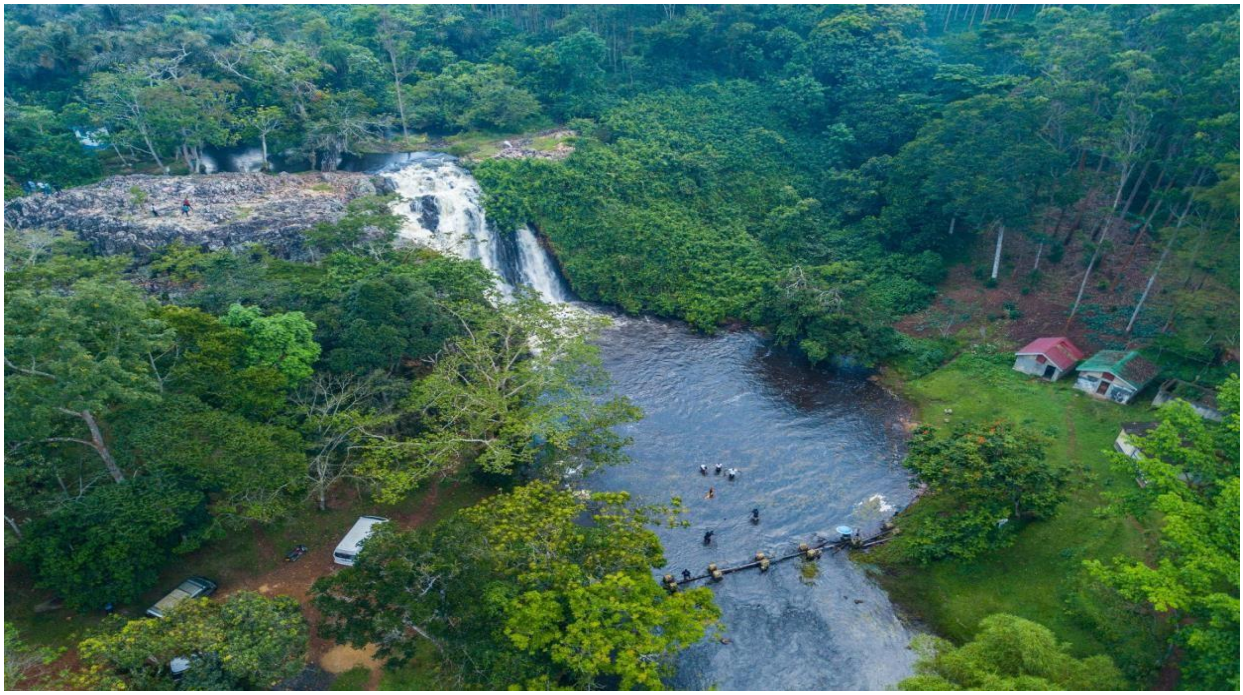

a) Help Adriko and community leaders to understand how the landform came into existence.
b) Explain to Adriko and to the community members how landform can enable them improve on their livelihood.

Item 4

A river is a natural flowing stream of water originating from usually upland areas to lowland areas. Rivers can originate from a mountain, a lake or even a wetland. Rivers flow through steep valleys before draining their waters in a lake or sea. Rivers are fed by melting glaciers and rainfall received in the area hence increasing their volume as they flow. As a river flows, it curves out a path through the landscape hence creating various features through vertical erosion. Later the river widens and slows down eroding sideways rather than down. It starts to transport larger amounts of sediments and shapes more gentle landforms. A s a river nears its mouth; it becomes sluggish and it deposits more than it erodes. It forms impressive depositional landforms.

During a fieldwork study in an area with a river, you saw some landforms formed by the river as it flows. The features that captured your attention most were the narrow deep valley with steep sides, water falling from a high level to a low level and a depression created at the base of water falling.

Your teachers tasked your group to find out how these landforms came into existence and how the community people can utilize them to better their lives.

a) Identify any two landforms mentioned in the scenario and describe how they came into existence
b) Explain how people can utilize the river and the landforms identified in the scenario to better their lives.

PART II

Choose one item from this part

Item 5

In the different cities of East Africa, population size has doubled in the recent years making the region one of those with the fastest urban growth rate. The reasons behind this increasing population trend include increased job opportunities, better social services, supportive government policies among others. City planners however are worried with this increase due to the challenges that come with this trend and they have organised a meeting with city authorities to address the challenges before its too late. You have been invited to that meeting as a special guest speaker to address the leaders.

Support Material

Urban population in East Africa in 2026

Country	Urban population
Uganda	15,600,000
Kenya	18,000,000
Tanzania	24,800,000

Source: World bank data

Task

a) Using a suitable statistical diagram to represent the information tabulated above
b) Explain to the City Authorities the challenges that arise with the trend identified in the scenario

Item 6

For a long time, Uganda has been a major exporter of raw material or semi-processed agricultural products and minerals. The country has continued to import a variety of high value industrial product. A lot of the foreign exchange earnings has been spent on these through trade with other countries like Kenya. To date, Uganda has designed programs aimed at transforming the raw materials to another state before export. Industrial parks have been established to ensure that there is processing of commodities.

Year	Exports Million US Dollars	Imports Million US Dollars
2016	442.9	542.7
2017	551.0	519.3
2018	580.3	559.3
2019	442.7	785.2

Task

a) Draw a suitable graph to show the trend of Uganda's trade with Kenya
b) What are the consequences of such a trend on Uganda's economy and what measures can be taken to have a favourable position in this trade.
