PRINCIPLES AND PRACTICES OF AGRICULTURE

Paper 1

Theory

2 hours 30 minutes

INSTRUCTIONS TO CANDIDATES:

- ✓ *This paper consists of* **six** *examination items. It has two sections;* **A** *and* **B**.
- ✓ *Section* **A** *has* **two** *compulsory items.*
- ✓ *Section* **B** *has* **two** *parts;* **I** *and* **II**. *Respond to* **one** *item from each part.*
- ✓ *Respond to* **four** *examination items in all.*
- ✓ *Any additional item (s) responded to will* **not** *be scored.*
- ✓ **All** *responses* **must** *be written in the answer booklet (s) provided.*

SECTION A

SOIL STRUCTURE AND VALUE ADDITION

Respond to **all** *items in this section*

Item 1.

In Kigowa village, many farmers got interested in beef farming after realising that their neighbours in Ikanda were reaping a lot of money from the meat. They transport meat in plastic bags, the flow of slaughter house is made of mud and it lacks the shade, there is no water at the slaughter house, the customers have no latrine around instead they disturb the neighbours, the animals are flayed using blunt knives which gives the animals stress and after slaughter, the animals are not given enough time to bleed out the blood and the carcasses are flayed later when they are cool. In few years since they started, the price has declined from shs. 18,000 to shs. 5,000 per kilogram. Most of the farmers are now lamenting and complaining after joining the business and most of them are now blaming the government for failing to control the fluctuation of the price. They have come up with an idea of value addition such that they increase on the profit they make from beef business. 2

Task:

a) Advise Kigowa village farmers on how they can improve the marketing of their meat. (include reasons for your responses).
b) Guide Kigowa village farmers on how to come up with any meat product.

Item 2.

Racheal established mango plantation on her gentle sloping land. This same piece of land is being claimed by another farmer which is disturbing her mind and she is confused of what to do. During preparation, some soils were carried down the slope leaving red coloured soil behind. The lower part of her land has a lot of stagnant water and sticky soil, tree stamps and stones. A good number of dead soils were observed due to use of herbicides. Along the slope, the soil is more compacted and it has less air percentage.

Task:

Advise Racheal on how to improve the productivity of her land.

SECTION B

Part I: ANIMAL PRODUCTION

*Respond to only **one** item from this part.*

Item 3.

Livestock is among the fastest growing industries in Uganda. Mr. Ogwanga received two healthy dairy heifers through the government "Emyooga" program. He divided his small grass thatched house into two in order to create space where the heifers would be housed. The district animal nutritionist advised him to feed them on a ration of 22% crude proteins for the first three months upon arrival. He obtained maize bran of 16% crude proteins and soya beans meal of 48% crude proteins. He plans to mix 1000kg of the 2 feeds every after three weeks but he lacks skills about it.

3

Task: Guide Mr. Ogwanga on what to do to come up with a ration and required quantities of ingredients to make 1000kg ration.

Item 4.

Treasure Mixed Farm deals in both crop growing and goat rearing. A veterinary officer visited the farm and found out that the goats were too small, had standing hair coat, some were coughing yet others were eating less due to lack of appetite. Also, some animals had lost hair from their bodies due to scratching on rough surface, others had pot belly stomachs and, in the dung, there were segments of tapeworms, the structure had a leaking roof and the floor was on the ground and muddy. The general productivity of the farm had reduced and the farm owner is almost giving up on goat rearing.

Task:

Advise the farm owner on how to solve the problems on the farm for better goat performance.

Part II: CROP PRODUCTION

*Respond to only **one** item from this part.*

Item 5.

Kasolwe is a prominent village commonly known for maize production. Farmers grow maize and get good yields from the gardens but after harvesting, they put their maize in the store so as to wait for higher prices of the maize crop. One day, a

farmer opened his store and found out that the grains were rotting because of leaking roof while others were eaten by rats and other pests. Another farmer found his store broken and all the grains were taken. Some farmers pour the maize grain direct on the ground without packaging in the store, other maize grains were germinating due to access to water from the wall and around the store there was a thick bush and floods around.

Task: As an expert in crop handling, help these farmers on how to solve their problems.

4

Item 6.

Sandra's father picked interest in growing beans after watching harvest money expo on one of the television channels. However, it was amidst planting season, so he decided to just slash his garden and immediately started planting using a hoe with a blunt blade. He ordered for the planting materials from one of the prominent shops in the trading centre. When he received the seeds, they were tiny, wrinkled and had holes but he was not bothered. The bean seeds were mixed with other seeds from wild plants that germinated before the beans. A few bean seeds germinated and he had to buy more other seeds for planting. He used a non-selective herbicide to weed the crops and finally, he had no harvest that season.

Task:

Give advice to Sandra's father on what he should do next season of planting beans for good harvest.
